

ISA/ISPA-W

Super Large Single-Axis Robot

ISDACR/ISPDACR-W

Super Large Single-Axis Robot Cleanroom Type

The Results of Our Quest for Ultimate Performance

ISA/ISPA/ISDACR/ISPDACR

Super large type actuator capable of transferring up to 150 kg

ISA/ISPA

Long-stroke cleanroom type conforming to cleanliness class 10

ISDACR/ISPDACR

(*) The ISPA and ISPDACR are high-precision versions of the ISA and ISDACR

Super Large Single-Axis Robot (Standard/ Cleanroom Types) Capable of Transferring Loads Weighing up to 150 kg for a Maximum Distance of 2500 mm

1. Long Stroke / Cleanliness Class 10

By integrating the mid-support mechanism, a long stroke of up to 2500 mm was achieved. The ball screw that runs the slider enables high-accuracy and transfer of heavy loads. The cleanroom type adopting a stainless-sheet seal structure conforms to cleanliness class 10. High-speed transfer over long distance has now become possible inside a cleanroom.

2. High Load Capacity

The high-output motor and high-rigidity base integrate to achieve a maximum load capacity of 150 kg in horizontal applications and 60 kg in vertical applications.

Cross section view of ISA series

3. High Speed and Quick Acceleration

The maximum speed of 2400 mm/sec and maximum acceleration/deceleration of 1 G help shorten the cycle time considerably.

4. High Precision

The ISPA/ISPDACR adopts a C5-equivalent precision rolled screw to achieve a positioning repeatability of ± 0.01 mm.

5. Adjustable Cable Outlet Direction (ISA Series)

With the ISA Series, the cable outlet direction can be changed from the rear (standard) to side (left or right), providing a space-saving solution in the longitudinal direction.

1 Series

Indicates the name of each series.

ISA: Single-axis robot, standard specification
 ISPA: Single-axis robot, high-precision specification
 ISDACR: Cleanroom type single-axis robot, standard specification
 ISPDACR: Cleanroom type single-axis robot, high-precision specification

2 Type

Indicates the classification by shape (e.g., slider, arm), size (e.g., S, M, L), etc.

WXM: Super large X-axis type
 WXXM: Super large mid-support X-axis type
 W: Super large type
 WX: Super large mid-support type

3 Encoder type

Indicates whether the encoder installed in the actuator is the "absolute type" or "incremental type."

A: Absolute type
 The current slider position will be retained even after the power is turned off, so home return is not required the next time the power is turned on.
 I: Incremental type
 The slider position data will be cleared once the power is turned off, so home return is required every time the power is turned on.

4 Motor output

Indicates the output of the motor installed in the actuator (unit: W).

5 Lead

Indicates the ball screw lead.

The lead refers to the distance the slider travels with each revolution of the ball screw (unit: mm).
 The greater the lead is, the faster the maximum speed becomes.

6 Stroke

Indicates the actuator stroke (operating range) (unit: mm).

7 Applicable controller

Indicates the types of supported controllers.
 T1: X-SEL-J/K, SCON, SSEL
 T2: X-SEL-P/Q

8 Cable length

Indicates the length of the motor/encoder cables that connect the actuator and the controller.

N: No cable
 S: 3 m
 M: 5 m
 X□□: Specify a length other than 3 and 5 m. (Example: X08 = 8 m)
 * The standard motor / encoder cables are robot cables.

9 Options

Indicates the options to be equipped on the actuator.
 Refer to page 13 for the details of each option.

* When selecting multiple options, enter the desired options in alphabetical order. (Example: AQ-B-L-NM)

* In the above model names, [1] indicates the encoder type, [2] the stroke, [3] the applicable controller, [4] the cable length, and [5] the applicable options.

Options

Name	Code	Page	Name	Code	Page
AQ seal	AQ	P13	Master-axis designation	LM	P13
Brake	B	P13	Reversed home specification	NM	P13
Creep sensor	C	P13	Slave-axis designation	S	P13
Home limit switch	L	P13	Cable Exit Direction	A1/A3	Diagram Below

* The WXM type comes standard with home limit switch (code: L).

Common Specifications

* The specifications of the ISPA are shown in [].

Positioning repeatability (Note 3)	±0.02mm [±0.01mm]
Drive system (Note 4)	Ball screw ø20mm, equivalent to rolled C10 [equivalent to C5]
Backlash (Note 5)	0.05mm or less [0.02mm or less]
Guide	Integrated with base
Allowable load moment (Note 6)	Ma: 139.2N • m, Mb: 199.9N • m, Mc: 391N • m
Overhang load length	Ma/Mb/Mc directions: 900mm or less
Base	Material: Aluminum with white alumite treatment
Applicable controller	T1: XSEL-J/K, T2: XSEL-P/Q, SSEL, SCON
Cable length (Note 7)	N: No cable, S: 3m, M: 5m, X□□: Length specification
Ambient operating temperature/humidity	0~40°C, 85% RH (non-condensing)

Dimensions

* Those equipped with an optional brake have the same external dimensions, but the weight increases by 0.5 kg.

* To change the home direction, the actuator must be returned to |A| for adjustment.

*1 Connect the motor cable and encoder cable here. Refer to page 14 for the details of each cable.
 SE: Stroke end
 ME: Mechanical end

*2 During home return, the slider will move to the ME, so be careful to prevent contact with surrounding parts.

Dimensions, Weight and Maximum Speed by Stroke

Stroke	100	200	300	400	500	600	700	800	900	1000	1100	1200	1300

Maximum speed (mm/s) * Varies depending on the stroke.	Lead 40	2400							1840	1530	1290	1100	950
	Lead 20	1200							920	765	645	550	475
	Lead 10	600							460	380	320	270	235

Applicable Controller Specifications

Applicable controller	Maximum number of controlled axes	Compatible encoder type	Operating method	Supply voltage	Page
X-SEL-P/Q	6 axes	Absolute /incremental	Program	Three-Phase AC200V	P14
X-SEL-K	4 axes			AC100/200V	P14
X-SEL-J (Note 8)	4 axes			AC200V	P14
SSEL	2 axes			AC200V	P14
SCON	1 axis			Positioner Pulse train	P14

* The WXM type comes standard with home limit switch, so use it with a controller of the limit switch specification.

(Note 1) When the stroke increases, the maximum speed drops in order to prevent the ball screw from reaching a critical speed. (Refer to the above table for the maximum speed at each stroke.)
 (Note 2) Refer to page 4 for the relationship of acceleration and load capacity.
 (Note 3, 4, 5) Specs within the [] are for the ISPA series.
 (Note 6) For 10,000km actuator life.
 (Note 7) The maximum cable length is 30 m. Specify a desired length in meters. (Example: X08 = 8 m)
 (Note 8) When using the WXM type actuator for vertical applications, please use a controller other than XSEL-J type controller.

ISA-WXM-750

Single-Axis Robot: Super Large X-Axis Long Slider Type, Actuator Width 198mm, 750W, Straight Shape

ISPA-WXM-750

Single-Axis Robot: Super Large X-Axis Long Slider Type, Actuator Width 198mm, 750W, Straight Shape, High-Precision Specification

Type Super large X-axis (198-mm wide) Long slider type Stroke 100~1300mm Load capacity 120kg (horizontal)/29kg (vertical)

SCON	1 axis			Positioner Pulse train	P14

* The WXMX type comes standard with home limit switch, so use it with a controller of the limit switch specification.

Caution

(Note 1) When the stroke increases, the maximum speed drops in order to prevent the ball screw from reaching a critical speed. (Refer to the above table for the maximum speed at each stroke.)

(Note 2) Refer to page 4 for the relationship of acceleration and load capacity.

(Note 3, 4, 5) Specs within the [] are for the ISPA series.

(Note 6) For 10,000km actuator life.

(Note 7) The maximum cable length is 30 m. Specify a desired length in meters. (Example: X08 = 8 m)

(Note 8) When using the WXM type actuator for vertical applications, please use a controller other than XSEL-J type controller.

ISDACR-W-600

Single-Axis Robot: Super Large Cleanroom Type, Actuator Width 198mm, 600W, Straight Shape

ISPDACR-W-600

Single-Axis Robot: Super Large Cleanroom Type, Actuator Width 198mm, 600W, Straight Shape, High-Precision Specification

Type Super large (198-mm wide) Stroke 100~1300mm Load capacity 150kg (horizontal)/60kg (vertical)

Model specification items Series Type Encoder type Motor output Lead Stroke Applicable controller Cable length Options

(Example) ISDACR -W- A - 600 - 40 -1300- T1 - S -L-NM

* Refer to page 3 for the details of model specification items.

Models/Specifications

Model	Encoder Type	Motor output (W)	Lead (mm)	Stroke 100mm increments (mm)	Speed (Note 1) (mm/s)	Acceleration (Note 2)				Load capacity (Note2)				Rated thrust (N)	Suction rate (Nℓ/min)
						Horizontal (G)		Vertical (G)		Horizontal (kg)		Vertical (kg)			
						Rated	Maximum	Rated	Maximum	Rated acceleration	Maximum acceleration	Rated acceleration	Maximum acceleration		
ISDACR [ISPDACR]-W-[1]-600-40-[2]-[3]-[4]-L-[5]	Absolute Incremental	600	40	100 - 1300	1 ~ 2000	0.3	1.0	0.3	1.0	60	18	14	5	255	120

 (Note 7) The maximum cable length is 30 m. Specify a desired length in meters. (Example: X08 = 8 m)
 (Note 8) When using the WX type actuator for vertical applications, please use a controller other than XSEL-J type controller.

AQ Seal**Code** AQ**Explanation**

The AQ seal is a lubrication unit that uses lubricating material made of resin-solidified lubricating oil. The porous material impregnated with a large amount of lubricating oil slowly releases oil from its surface via capillary effect. The guide and ball screw surfaces (steel-ball rolling surface) are constantly lubricated as AQ seals are pressed against these surfaces. When used with grease, AQ seals enable maintenance-free operation for a long period.

**Brake****Code** B**Explanation**

A retention mechanism that prevents the slider from falling and consequently damaging the load when the power or servo is turned off in a vertical actuator application.

Creep Sensor**Code** C**Explanation**

This sensor is used to perform high-speed home return. During home return, the slider normally contacts the stopper at the motor-side stroke end and then reverses its direction. For this reason, the homing speed is limited to 10 to 20 mm/s and it therefore takes time to complete home return when the stroke is long. This proximity sensor is used to shorten the time by allowing the slider to return at high speed until immediately before the home and then reduce its speed to the normal homing speed. Since this sensor is built into the actuator, the actuator dimensions remain the same.

Home Limit Switch**Code** L**Explanation**

Single-axis robots normally perform home return based on the “contact method” whereby the slider contacts the stopper and then reverses its direction, after which phase Z is detected and the corresponding position is set as the home. When option L (home limit switches) is specified, home return is performed with the slider reversing not upon contact, but upon detection by a proximity sensor. Specifying option L adds the three proximity sensors of HOME (for home detection), +OT (for overtravel detection on motor side) and –OT (for overtravel detection on counter-motor side) to the actuator. (The HOME and –OT sensors are provided as an integrated twin sensor.) Super-large types that generate high thrust come standard with option L for safety reasons. The limit switch is also built into the actuator, just like the creep sensor.

Master-Axis Designation for Synchronized Operation**Code** LM**Explanation**

“Synchronized operation” is one of the functions provided by the X-SEL controller. This function allows two actuator axes to be operated simultaneously, with one axis functioning as the master (code: M) and the other as the slave (code: S). By causing the slave to follow the master via ultra high-speed control, the two axes operate virtually simultaneously. The two synchronized actuator axes must be of the exact same specifications (type, lead, motor output and stroke). When synchronized operation is to be performed, the master axis must have limit switch. Accordingly, add LM (master-axis specification with limit switch) to the model of the master axis and S (slave-axis specification) to the model of the slave axis.

Reversed Home Specification**Code** NM**Explanation**

The standard home direction is on the motor side. To change the home direction, the encoder must be adjusted. Should you require the reversed home specification, specify this option in your order.

Slave-Axis Designation for Synchronized Operation**Code** S**Explanation**

Specify this code for the slave axis in synchronized operation (refer to the explanation of “LM”).

Suction Duct Joint on Opposite Side (ISDACR and ISPDACR Only)**Code** VR**Explanation**

The standard position of the air suction joint is on the left side when viewed from the motor, and this option is to change the position to the opposite side (right side).

Controller

A controller of program, positioner or pulse-train input type can be selected in accordance with the control method suitable for your application.

* Refer to the separate catalogs for the details of the controllers.

Program Operation Type

[X-SEL Controller]

A high-functional, multi-axis controller supporting Super SEL Language - a programming language that enables easy programming of complex operations.

- [Features]
- Simultaneous control of up to 6 axes
 - Registration of up to 64 programs/3000 positions
 - Absolute or Incremental specification
 - Compatible with DeviceNet, CC-Link, Profibus and Ethernet
 - CE Mark certified

SSEL Controller

A 2-axes positioner that enables easy positioning operation. The SSEL program controller has various control functions combined into a single unit.

- [Features]
- Up to 1,500 positioning points
 - Support of both absolute and incremental actuators and Ethernet
 - With 2 axes, arc interpolation and path operation can be performed

SCON Controller

Position controller capable of 1 axis control.

- [Features]
- Supports up to 512 positioning points
 - DeviceNet, CC-Link specifications (optional)
 - Pulse converter option

Motor Cable/ Encoder Cable * In , enter a desired cable length (L) up to 30 m. (Example: 080 = 8 m)

Motor Cable (XSEL-J/K/P/Q, SSEL, SCON)

[Model: CB-X-MA□□□]

Wiring Diagram

Wire	Color	Signal	No.	No.	Signal	Color	Wire
