

Mini ROBO Cylinder

RCP3

RCA2

RCS2

RCL

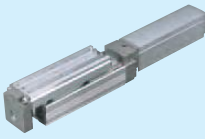

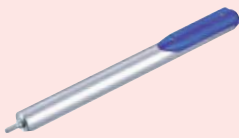

Variations have been expanded with:

- Additional RCS2 series
- Additional Stroke 50/75 mm
- Additional Controller SCON-CA

The compact, next-generation electric actuator

Mini ROBO Cylinder

Mini ROBO Cylinder (space-saving)

The Mini ROBO Cylinder is an achievement in small electromechanical cylinders. It incorporates a newly developed motor, and its significantly reduced length, width and height make it comparable in size to air cylinders. The Mini ROBO Cylinder is the perfect replacement for air cylinders in systems that previously could only use air cylinders due to size constraints.

The Mini Table Compact type RCA2-TCA3NA has dimensions smaller than a business card.

Shaped like an air cylinder and easy to use

The Mini ROBO Cylinder is available in shapes similar to air cylinders. Users accustomed to the operation of pneumatic systems are able to use the new ROBO Cylinder effortlessly.

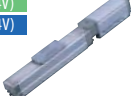

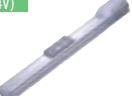

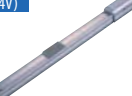

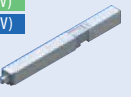

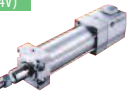

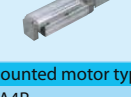

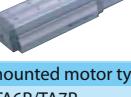

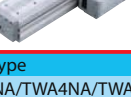

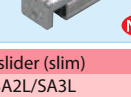

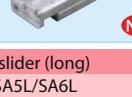

Expanded Variations

New models have been added, including slim types with contracted actuator width and high-payload, long-stroke types of 46 mm in actuator width, to support greater applications.

	Appearance						

*The type code indicates the width of the actuator. Take note that actuators of the same type code have different dimensions depending on the model. For details, refer to the drawings for each type.

type	Actuator width
2A	22mm
2B	28mm
3	28~36mm
4	34~45mm
5	48~55mm
6	58~64mm
7	71~75mm
8	80mm
10	100mm
13	130mm

* "Pulse (24V)", "Servo (24V)" and "Servo (100V/200V)" indicate motor types.

Pulse (24V) → RCP3/RCP2 series
 Servo (24V) → RCL/RCA2/RCA series
 Servo (100V/200V) → RCS2 series

Mini Slider type

The slider on the main body moves back and forth until it is positioned.

Features

- The motor can easily perform switching operations for the unit model.
- Select from Side-Mounted Motor type with a reduced total length and Slim Straight type (Coupling type).

Usage

Used for jig and workpiece positioning, table travel, etc

Motor Unit Coupling type

Side-Mounted Motor type

Mini Rod type

The rod extends and retracts from the main body, gets into position and presses.

Features

- Select from Slim Motor Unit types and Short Length types having greatly reduced overall length.
- Select from Guide types with highly rigid/linear built-in guides and those without guides having drastically miniaturized main body sizes.

Usage

Used for raising/lowering products and jigs, pushing, clamping, etc.

Short Length,
Double-Guide
Free Mount type

Motor Unit

Motor type

Short Length,
Double-Guide
Slide Unit type

Short Length,
Fixed Nut type

Short Length,
Tapped Hole type

Short Length,
Single-Guide
Free Mount type

Mini Table type

The table on the main body slides until it is positioned.

- Features**
 - Comes equipped with an integrated guide that keeps overhung loads balanced.
 - Select from Compact, Short Length types and Long Stroke Motor Unit types.
- Usage**
 - Used for raising/lowering products and jigs, horizontal moving, and pushing (handles overhung loads from the main unit).

Side-Mounted Motor type

Motor Unit Coupling type

Short Length Wide type

Short Length Flat type

Short Length Compact type

Mini Linear Servo type

High speed, lightweight parts transfer.

- Features**
 - Equipped with a high acceleration/ deceleration linear motor capable of operation at up to 2G.
 - Available in Slider type and Rod type. Slider type comes in six different models for each size and stroke.
 - The Multi-slider type comes with two sliders on one actuator that can be independently operated.
- Usage**
 - Used for transfers requiring short cycle times, etc.

Micro Slider Slim type

Micro Slider Long Stroke Type single slider

Micro Slider Long Stroke Type Multi-slider

Micro Cylinder Slim type

Controller

Lineup of models meeting various applications, from 3-point positioning types controlled like solenoid valves to network types

You can choose a desired controller from those of various control methods, such as 3-point positioning types whose teaching and trial operation can be done using the controller's operation panel, multi-point positioning types supporting up to 512 positioning points, and network types that can be connected to various networks.

Since 3-point positioning types (3 position controller) can be operated with the same signal as the ones of solenoid valves, the device with the currently used air device can be changed to an electric cylinder. (Refer to the page on the right for details.)

Refer to the table below for the various actuator models (series) and controllers that can be connected.

Type of controller	Positioner type		Network type	Program type
	3-position controller	512-position controller		
Features	<ul style="list-style-type: none"> Easy to operate, as the actuator can be operated simply by turning signals ON/OFF. Can be operated using the same signals used for solenoid valves. 	<ul style="list-style-type: none"> Multi-point positioning to 512 points is possible. Pulse-train control is also supported. 	<ul style="list-style-type: none"> Directly connectable to key field networks. Coordinate values can be specified directly using numeric values to move the actuator. The current position and axis condition can be checked with a host device. 	<ul style="list-style-type: none"> Standalone operation is possible without using a PLC or other host device. Simultaneous control of up to 2 axes (PSEL, ASEL, SSEL) or six axes (XSEL) is possible.
<p>RCP3</p>	<p>PMEC PSEP</p>	<p>PCON-CA PCON-C</p>	<p>PCON-C RPCON</p>	<p>PSEL</p>
<p>RCA2 RCL</p>	<p>AMEC ASEP</p>	<p>ACON-C</p>	<p>ACON-C RACON</p>	<p>ASEL</p>
<p>RCS2</p>		<p>SCON-CA</p>	<p>SCON-CA</p>	<p>SSEL XSEL</p>

New P MEC/AMEC, P SEP/ASEP controllers designed exclusively for 2-point and 3-point positioning

Unlike conventional controllers, the P MEC/AMEC, P SEP/ASEP require only a few movement positions. These "Simple, Easy Positioner" controllers are for applications where the actuator travels only between two or three points, which is usually the case with air cylinders.

P MEC/AMEC controllers come with an operation panel to let you set the stop position, speed and acceleration/deceleration and perform test operation, so those who are not experts in electrical wiring can also set/adjust ROBO cylinder operations with ease.

Operates using the same signals used for air cylinder solenoid valves.

P MEC/AMEC, P SEP/ASEP operating methods

P MEC/AMEC, P SEP/ASEP controllers can be operated with the same signals used for air cylinder solenoid valves.

Solenoid valves come in two types: Single solenoids and Double solenoids. The P MEC/AMEC, P SEP/ASEP supports signals for both.

■ When using an air cylinder solenoid valve:

<Single solenoid>

Signal to solenoid 1	Rod movement
ON	Front end
OFF	Rear end

<Double solenoid>

Signal to solenoid 1	Signal to solenoid 2	Rod movement
ON	OFF	Front end
OFF	ON	Rear end

■ P MEC/AMEC, P SEP/ASEP:

<Replacement of single solenoid>

*Desired positions for front end and rear end can be freely set.

(P MEC/AMEC, P SEP/ASEP)

Signal to controller Input 0	Rod movement
ON	Front end
OFF	Rear end

<Double solenoid>

(P MEC/AMEC, P SEP/ASEP)

Signal to controller Input 1	Signal to controller Input 0	Rod movement
ON	OFF	Front end
OFF	ON	Rear end

* The main body moves between the same two points listed above, but it can also travel between three points by switching the parameters.

■ Skillful use of the "Lead Screw" type

- (1) Lead screws are suitable for uses with infrequent operations. (As a guide, this would be approximately 5 years, for 1 operation every 10 seconds, 24-hour use, 240 days a year.)
- (2) Lead screws are suitable for uses with small payloads, light loads. (1kg or less)
- (3) Use when repeated positioning accuracy of less than ±0.05mm is needed.
- (4) Please set up in a location where maintenance will be easy.

■ Skillful use of the “Lead Screw” type

- (1) Lead screws are suitable for uses with infrequent operations. (As a guide, this would be approximately 5 years, for 1 operation every 10 seconds, 24-hour use, 240 days a year.)
- (2) Lead screws are suitable for uses with small payloads, light loads. (1kg or less)
- (3) Use when repeated positioning accuracy of less than ±0.05mm is needed.
- (4) Please set up in a location where maintenance will be easy.

Model Descriptions

Models for each ROBO Cylinder series are designated by the items below.

See the explanations below for information on each item. The range of selections for each item (lead, stroke, etc.) varies by type, so refer to the page for each type for more information.

Explanation of Items

① Series	This indicates the name of each series.
② Type	This indicates the shape (slider, rod, etc.), size (width 22mm, etc.) and motor connection method, etc.
③ Encode type	This indicates whether the encoder installed in the actuator is an "absolute type" or an "incremental" type. * If the controller for the Simple Absolute type is used, use actuator encoder type "I" (incremental specification).
④ Motor type	This shows the wattage of the motor installed in the actuator. Since the RCP3 Series uses a pulse motor, the motor size (20P=20□ motor) is shown instead of the wattage.
⑤ Lead	This shows a feed screw lead (the distance the slider moves per revolution of the feed screw). Ball screws are shown in numerals only. Lead screws have an S after the number.
⑥ Stroke	This indicates the stroke for the actuator (operating range). (Units are in mm)
⑦ Compatible Controllers	This indicates the controller types that can be connected. (The motor-encoder cable changes according to type of controller.)
⑧ Cable length	This indicates the length of the motor-encoder cable connecting the actuator and controller.
⑨ Option	This indicates the options that can be installed on the actuator. * If multiple options are selected, specify them in alphabetical order. (Example:A3-B-ML)

* See page 14 for details on the model descriptions.

■ **Correlation Diagrams of Speed and Load Capacity**
With the RCP3 series, due to the characteristics of the pulse motor, load capacity decreases as the speed increases. Use the chart below to confirm that the desired speed and load capacity requirements are met.

- POINT**
Notes on selection
- (1) The payload is the value when operated at 0.2G acceleration. The acceleration upper limit is the value indicated above.
 - (2) Cannot be used in the horizontal orientation with the slider facing to the side or in the vertical orientation.
 - (3) Service life decreases significantly if used in a dusty environment.

Actuator Specifications

Item	Description
Drive System	Lead screw, ø4mm, rolled C10
Lost motion	0.3mm or less (initial value)
Base	Material: Aluminum, white alumite treated
Guide	Slide guide
Ambient operating temperature, humidity	0 to 40°C, 85% RH or less (Non-condensing)
Service life	10 million cycles

Dimensional Drawings

CAD drawings can be downloaded from the website. www.intelligentactuator.com

- *1 Connect the motor and encoder cables.
- *2 During home return, be careful to avoid interference from peripheral objects because the slider travels until the mechanical end.

■ Dimensions and Weight by Stroke

Stroke	25	50	75	100
L	169.5	194.5	219.5	244.5
A	96	121	146	171
B	25	50	75	100
C	0	0	0	50
D	4	4	4	6
Mass (kg)	0.25	0.27	0.29	0.3

② Compatible Controllers

RCP3 series actuators can be operated with the controllers indicated below. Select the type according to your intended application.

Title	External View	Model	Features	Maximum number of positioning points	Input power	Power-supply capacity	Standard price	Reference Page
Solenoid valve type		PMEC-C-20PI-NP-2-①	Easy-to-use controller, even for beginners	3 points	AC100V AC200V	See the ROBO Cylinder general catalog.	-	→ P131
		PSEP-C-20PI-NP-2-0	Operable with the same signal as a solenoid valve. Supports both single and double solenoid types. No homing necessary with the simple absolute type.					→ P141
Splash-proof solenoid valve type		PSEP-CW-20PI-NP-2-0						
Positioner type		PCON-C-20PI-NP-2-0	Up to 512 positioning points are supported.	512 points	DC24V	Maximum: 2A	-	See the ROBO Cylinder general catalog
Safety-compliant positioner type		PCON-CG-20PI-NP-2-0						
Pulse-train input type (Differential line driver)		PCON-PL-20PI-NP-2-0	Pulse-train input type with differential line driver support	(-)	DC24V	Maximum: 2A	-	See the ROBO Cylinder general catalog
Pulse-train input type (Open collector)		PCON-PO-20PI-NP-2-0	Pulse-train input type with open collector support					
Serial communication type		PCON-SE-20PI-N-0-0	Dedicated to serial communication	64 points				
Field network type		RPCON-20P	Dedicated to a field network	768 points				
Program control type		PSEL-C-1-20PI-NP-2-0	Program operation is supported. Up to two axes can be operated.	1500 points				

* This is for the single-axis PSEL
* ① indicates the power-supply voltage type (1: 100 V/2: 100 to 240 V).

I: Incremental specification * Model number is "I" when used with simple absolute unit.	20P: Pulse motor 20□□size	6S: Lead screw 6mm 4S: Lead screw 4mm 2S: Lead screw 2mm	25: 25mm ? 150: 150mm (every 25mm)	P1: PCON R: RCON PSEL P3: PMEC PSEP	N: None P: 1 m S: 3 m M: 5 m X□□: Length Designation	See options table below. * Be sure to specify which side the motor is to be mounted (ML/MR).		

* See page 14 for details on the model descriptions.

Photo above shows specification with motor side-mounted to the left (ML Option).

■ Correlation Diagrams of Speed and Load Capacity
With the RCP3 series, due to the characteristics of the pulse motor, load capacity decreases as the speed increases. Use the chart below to confirm that the desired speed and load capacity requirements are met.

- POINT**
Notes on selection
- (1) The payload is the value when operated at 0.2G acceleration. The acceleration upper limit is the value indicated above.
 - (2) Cannot be used in the horizontal orientation with the slider facing to the side or in the vertical orientation.
 - (3) Service life decreases significantly if used in a dusty environment.

- POINT**
Notes on selection
- (1) The payload is the value when the actuator is operated at an acceleration of 0.3 G (0.2 G for the lead screw specification, if used vertically). The acceleration limit is the value indicated above.
 - (2) The horizontal payload is the value when used in combination with an external guide. Please note that if an external force is applied to the rod in a direction other than the proper direction the rod travels, the detent may get damaged.
 - (3) The maximum pushing force is the value when the actuator is operated at a speed of 5 mm/s.
 - (4) Service life decreases significantly if used in a dusty environment.

Correlation Diagrams of Speed and Load Capacity

With the RCP3 series, due to the characteristics of the pulse motor, load capacity decreases as the speed increases. Use the chart below to confirm that the desired speed and load capacity requirements are met.

* See page 14 for details on the model descriptions.

- POINT**
Notes on selection
- (1) The payload is the value when the actuator is operated at an acceleration of 0.3 G (0.2 G for the lead screw specification, if used vertically). The acceleration limit is the value indicated above.
 - (2) The horizontal payload is the value when used in combination with an external guide. Please note that if an external force is applied to the rod in a direction other than the proper direction the rod travels, the detent may get damaged.
 - (3) The maximum pushing force is the value when the actuator is operated at a speed of 5 mm/s.
 - (4) Service life decreases significantly if used in a dusty environment.

Correlation Diagrams of Speed and Load Capacity

With the RCP3 series, due to the characteristics of the pulse motor, load capacity decreases as the speed increases. Use the chart below to confirm that the desired speed and load capacity requirements are met.

Actuator Specifications Table

Leads and Payloads

Model	Motor type	Feed screw	Lead (mm)	Maximum payload		Maximum pushing force (N)	Positioning repeatability (mm)	Stroke (mm)

- The payload is the value when operated at 0.3G acceleration. The acceleration upper limit is the value indicated above.
- The horizontal payload is the value when used in combination with an external guide. Please note that if an external force is applied to the rod in a direction other than the proper direction the rod travels, the detent may get damaged.
- Take note that, since there is no brake, the slider may come down when the power is turned off if the actuator is used vertically.

Power-saving specification

- POINT**
Notes on selection
- (1) The lead screw is not equipped with an anti-rotation device, so please attach a guide or similar locking device to the tip of the lead screw prior to use. (If there is no anti-rotation device attached, the lead screw cannot extend or retract.) When connecting the anti-rotation device and rod, do not use a floating joint.
 - (2) The horizontal payload is the value when the actuator uses an external guide.
 - (3) The payload is the value when the actuator is operated at an acceleration of 0.3 G (0.2G for lead 1, if used vertically and for lead screw specification). The acceleration limit is the value indicated above.
 - (4) Do not apply an external force on the rod in any direction other than the direction the rod is moving in.
 - (5) If the actuator is used vertically, pay attention to rod contact because the rod will come down when the power is turned off.

RCA2-RP3NA

ROBO Cylinder Mini Rod Type Short-Length Tapped-Hole Mounting Type Actuator Width 28 mm
24V Servo Motor Ball Screw Specification/Lead Screw Specification

Model Description	RCA2	RP3NA	I	10					
	Series	Type	Encoder type	Motor type	Lead	Stroke	Compatible controllers	Cable length	Option
			I: Incremental specification * Model number is "I" when used with simple absolute unit.	10: Servo motor 10W	4: Ball screw 4mm 2: Ball screw 2mm 1: Ball screw 1mm 4S: Lead screw 4mm 2S: Lead screw 2mm 1S: Lead screw 1mm	30: 30mm 50: 50mm	A1: ACON RACON ASEL A3: AMEC ASEP	N: None P: 1 m S: 3 m M: 5 m X□□: Length Designation	K2: Connector cable exits from the front LA: Power-saving specification

* See page 14 for details on the model descriptions.

Power-saving specification

- POINT**
Notes on selection
- (1) The lead screw is not equipped with an anti-rotation device, so please attach a guide or similar locking device to the tip of the lead screw prior to use. (If there is no anti-rotation device attached, the lead screw cannot extend or retract.) When connecting the anti-rotation device and rod, do not use a floating joint.
 - (2) The horizontal payload is the value when the actuator uses an external guide.
 - (3) The payload is the value when the actuator is operated at an acceleration of 0.3 G (0.2G for lead 1, if used vertically and for lead screw specification). The acceleration limit is the value indicated above.
 - (4) Do not apply an external force on the rod in any direction other than the direction the rod is moving in.
 - (5) If the actuator is used vertically, pay attention to rod contact because the rod will come down when the power is turned off.

Power-saving specification

POINT
Notes on selection

- (1) The horizontal payload is the value when used in combination with a guide so that a radial load and moment load are not applied to the rod. See P129 for correlation diagrams of the end load and service life when a guide is not installed. Also note that single-guide types cannot be used if a force is applied in the rotating direction. Use double-guide types in these applications.
- (2) The payload is the value when the actuator is operated at an acceleration of 0.3 G (0.2G for lead 1, if used vertically and for lead screw specification). The acceleration limit is the value indicated above.
- (3) If the actuator is used vertically, pay attention to rod contact because the rod will come down when the power is turned off.

POINT
Notes on selection

- (1) The horizontal payload is the value when used in combination with a guide so that a radial load and moment load are not applied to the rod. See P129 for correlation diagrams of the end load and service life when a guide is not installed. Also note that single-guide types cannot be used if a force is applied in the rotating direction. Use double-guide types in these applications.
- (2) The payload is the value when the actuator is operated at an acceleration of 0.3 G (0.2G for lead 2.5) horizontally and 0.2G vertically. The acceleration limit is the value indicated above.
- (3) If the actuator is used vertically, pay attention to rod contact because the rod will come down when the power is turned off.

Power-saving specification

POINT
Notes on selection

- (1) The horizontal payload is the value when used in combination with a guide so that a radial load and moment load are not applied to the rod. See P129 for correlation diagrams of the end load and service life when a guide is not installed.
- (2) The payload is the value when the actuator is operated at an acceleration of 0.3 G (0.2G for lead 1, if used vertically and for lead screw specification). The acceleration limit is the value indicated above.
- (3) The vertical payload is the value when the actuator is mounted and side bracket is operated. Take note that in vertical operation, the side bracket cannot be mounted to operate the actuator.
- (4) If the actuator is used vertically, pay attention to rod contact because the rod will come down when the power is turned off.

Power-saving specification

POINT
Notes on selection

- (1) The horizontal payload is the value when used in combination with a guide so that a radial load and moment load are not applied to the rod. See P129 for correlation diagrams of the end load and service life when a guide is not installed.
- (2) The payload is the value when the actuator is operated at an acceleration of 0.3 G (0.2G for lead 2, if used vertically and for lead screw specification). The acceleration limit is the value indicated above.
- (3) The vertical payload is the value when the actuator is mounted and side bracket is operated. Take note that in vertical operation, the side bracket cannot be mounted to operate the actuator.
- (4) If the actuator is used vertically, pay attention to rod contact because the rod will come down when the power is turned off.

POINT
Notes on selection

- (1) The payload is the value when the actuator is operated at an acceleration of 0.3 G (0.2G for lead 2.5) horizontally and 0.2G vertically. The acceleration limit is the value indicated above.
- (2) If the actuator is used vertically, pay attention to rod contact because the rod will come down when the power is turned off.

Actuator Specifications

Item	Description
Drive System	Ball screw, ø6mm, rolled C10
Lost motion	0.1mm or less
Base	Material: Aluminum, white alumite treated
Dynamic allowable moment (Note)	Ma: 4.2 N·m Mb: 6 N·m Mc: 8.2 N·m
Ambient operating temperature, humidity	0 to 40°C, 85% RH or less (Non-condensing)

(Note) For case of 5,000km service life.

Dimensional Drawings

CAD drawings can be downloaded from the website. www.intelligentactuator.com

* The drawing below shows the specification with motor side-mounted to the left.

With the brake: (see drawing on the right for dimensions)

The reference position for moment offset is the same as the position on the TA4C (P.94).

- *1 The motor-encoder cable is connected directly to the actuator motor cover.
- *2 The slider moves to the mechanical end during home return. Pay attention to prevent contact between the slider and surrounding parts.

■ Relation between payload (horizontal) and acceleration

Maximum Acceleration (G)	Load Capacity (kg)	
	Continuous operation (Duty is 100%)	Duty is 70% or less
0.1	0.5	0.5
0.3		
0.5	0.42	
1	0.25	0.32
1.5	0.18	0.24
2	0.15	0.2

POINT
Notes on selection

(1) The payload is determined by the acceleration and duty.
Verify the payload in the payload (horizontal) and acceleration chart at right.
The duty is $\frac{\text{Operating time}}{\text{Operating time} + \text{stop time}} \times 100$ per cycle.

(2) The mounting position is horizontal-only. Please take care because the slider will drop down with power OFF when operating vertically.

(3) Simple absolute unit cannot be used with the RCL series.

* See page 14 for details on the model descriptions.

Relation between payload (horizontal) and acceleration

Maximum Acceleration (G)	Load Capacity (kg)	
	Continuous operation (Duty is 100%)	
0.1	1.6	
0.3		
0.5	1.0	
1	0.5	
1.5	0.35	
2	0.25	

POINT Notes on selection

(1) Please take care because this type has magnetic flux leakage. (If magnetism is a problem, use SA1L/SA2L/SA3L)

(2) The payload is determined by the acceleration and duty. Verify the payload in the payload (horizontal) and acceleration chart at right.

The duty is $\frac{\text{Operating time}}{\text{Operating time} + \text{stop time}} \times 100$ per cycle.

(3) The mounting position is horizontal-only. Please take care because the slider will drop down with power OFF when operating vertically.

(4) Simple absolute unit cannot be used with the RCL series.

RCL-RA1L

ROBO Cylinder Mini Linear Servo Type Micro Cylinder Slim Type Main unit diameter: 16mm
Linear servo motor

■ Model Description	RCL — RA1L — I — 2 — N — 25 — — — 							
Series	Type	Encoder type	Motor type	Lead	Stroke	Compatible controllers	Cable length	Option
		I: Incremental specification	2: Linear servo motor 2W	N: No screw	25: 25mm	A1:ACON RACON ASEL A3:AMEC ASEP	N: None P: 1 m S: 3 m M: 5 m X□□: Length Designation	B : Brake (with brake box) BN: Brake (without brake box)

* See page 14 for details on the model descriptions.

Relation between payload (horizontal) and acceleration

Maximum Acceleration (G)	Load Capacity (kg)			
	Continuous operation (Duty is 100%)		Duty is 70% or less	
	Horizontal	Vertical	Horizontal	Vertical
0.1	0.5	0.1	0.5	0.1
0.3				
0.5	0.42		0.25	
1	0.2	—	0.15	—
1.5	0.11	—	0.1	—
2	0.07	—	—	—

Pushing force guidelines

Pushing operation is possible within the range of numeric values listed below. (N)

Electric current limit	30%	40%	50%	60%	70%	80%
Pushing force	0.75	1	1.25	1.5	1.75	2

(Note) The pushing forces listed above are for horizontal usage. If facing vertically upward, subtract 0.5N from the numeric values listed above, but if facing vertically downward, add 0.5N.

POINT Notes on selection

- The payload is determined by the acceleration and duty. Verify the payload in the payload (horizontal) and acceleration chart at right. The duty is $\frac{\text{Operating time}}{\text{Operating time} + \text{stop time}} \times 100$ per cycle.
- If the actuator is operated vertically, use the optional brake specification.
- Please use an external guide to avoid a horizontal or rotational load applied to the rod.
- The pushing force fluctuation increases when the current limit is low.
- Simple absolute unit cannot be used with the RCL series.

Actuator Specifications Table

Relation between payload (horizontal) and acceleration

Maximum Acceleration (G)	Load Capacity (kg)			
	Continuous operation (Duty is 100%)		Duty is 70% or less	
	Horizontal	Vertical	Horizontal	Vertical
0.1	1	0.2	1	0.2
0.3				
0.5	0.85			
1	0.4	0.5		
1.5	0.24	—	0.3	—
2	0.15	—	0.2	—

Pushing force guidelines

Pushing operation is possible within the range of numeric values listed below. (N)

Electric current limit	30%	40%	50%	60%	70%	80%
Pushing force	1.5	2	2.5	3	3.5	4

(Note) The pushing forces listed above are for horizontal usage. If facing vertically upward, subtract 1N from the numeric values listed above, but if facing vertically downward, add 1N.

POINT Notes on selection

- The payload is determined by the acceleration and duty. Verify the payload in the payload (horizontal) and acceleration chart at right. The duty is $\frac{\text{Operating time}}{\text{Operating time} + \text{stop time}} \times 100$ per cycle.
- If the actuator is operated vertically, use the optional brake specification.
- Please use an external guide to avoid a horizontal or rotational load applied to the rod.
- The pushing force fluctuation increases when the current limit is low.
- Simple absolute unit cannot be used with the RCL series.

Selection Guide (Push force and current limiting value correlation graph)

Use the following models for push-motion operation.

The push force applied in push-motion operation can be freely set by changing the current-limiting value in the controller.

The push force setting ranges differ according to type. Use the following chart to verify.

RCL Series

Micro Cylinder

●Setting the current limiting value in push-motion operation

For push-motion operation, set the current limiting values that determine push force. *The push force is an approximate standard, so it will vary somewhat. *The push time is not limited. Continuous pushing is possible.

Standard for push force

[N]

Current limiting value	30%	40%	50%	60%	70%	80%
RA1L	0.75	1	1.25	1.5	1.75	2
RA2L	1.5	2	2.5	3	3.5	4
RA3L	3	4	5	6	7	8

Caution

- Depending on the teaching pendant version or the PC software, the current limiting value can be set within 71% to 80%. Be sure to read the "Caution" section shown at the beginning of the manual.
- Movement speed during push operation is fixed at 20mm/s.

Effect by push direction

Horizontal

Push force = Thrust
F=f

Vertical (downward push)

Push force = Thrust + Mass of moving part
F=f+M

Vertical (upward push)

Push force = Thrust - Mass of moving part
F=f-M

Mass of moving part

Model	Mass of moving part [N]
RA1L	0.5
RA2L	1
RA3L	1.8

RCP3 Series

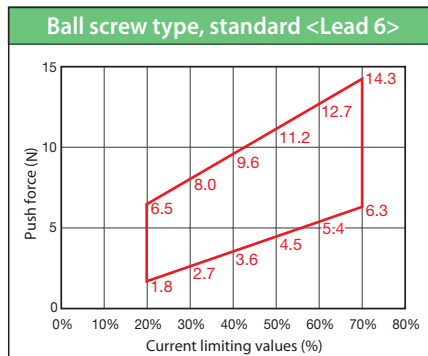

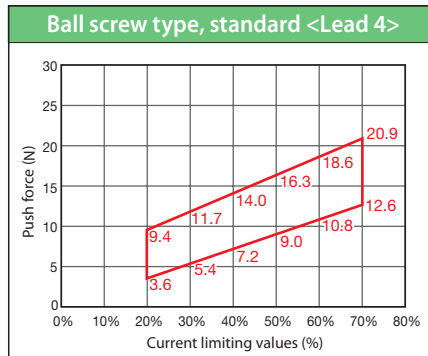

Mini Rod Type (RA2AC/RA2BC/RA2AR/RA2BR)

* The red line ranges are specification values.

For push-motion operation, select the model with the desired push force that falls within the range of the red line in the graph below.

Caution

- Movement speed during push operation is fixed at 5mm/s.

Selection Guide (Push force and current limiting value correlation graph)

RCP3 Series

Mini Table type

When using the table type for a push operation, limit the pushing current to ensure that the reaction moment generated by the push force does not exceed the catalog specification rated moment (M_a , M_b) of 80%.

Refer to the figure below for the operation position for moment calculations.

TA3C / TA3R : $h=10.5\text{mm}$
TA4C / TA4C : $h=11.5\text{mm}$

Caution

- Movement speed during push operation is fixed at 20mm/s.
- The push force is an approximate standard, so it will vary somewhat.

When using a slider type for a push operation, limit the pushing current to ensure that the reaction moment generated by the push force does not exceed the catalog specification **rated moment of 80%**.

Example of calculation:

When pushing at 44N at the position in the chart on the right using RCP3-TA4C (Lead 2) type:

The guide moment is

$$\begin{aligned} M_a &= (11.5+30) \times 44 \\ &= 1826 \text{ (N}\cdot\text{mm)} \\ &= 1.826 \text{ (N}\cdot\text{m)}. \end{aligned}$$

The TA4C allowable dynamic moment (M_a) is 4.2 (N·m), which means 80% is 3.36.

Therefore, a moment load greater than that actually received by the guide (1.826) can be used.

Push force and current limiting value correlation graph

Standard figures are shown in the table below. Actual figures will differ slightly.

Selection Guide (Information on Guide Type)

Load Moment and Reference Service Life

Actuators of mini slider type (RCA2-SA2AC/SA2AR) have a built-in guide, so they can receive a load overhanging from the slider.

Note, however, that the service life of the actuator will decrease if the specified dynamic allowable moment is exceeded.

(See the graphs below.)

When calculating this moment, use a point 25 mm below the top surface of the slider as the reference point. See the illustration at the bottom of this page.

Even when the allowable moment is not breached, keep the overhang length from the actuator (overhang length) within 40 mm.

Chart A

Directions of allowable load moments

Model Selection Materials (Guide)

Allowable Rotating Torque

The allowable torque for each model is specified below.

When rotational torque is exerted, use within the range of values specified below. Please note that single-guide types cannot be subjected to rotational torque.

Relationship Between Allowable Load at Tip & Running Service Life

The greater the load at the guide tip, the shorter the running service life.

Select the appropriate model while considering the balance between load and service life.

Radial Load & Tip Deflection

The graphs below show the correlation between the load exerted at the guide tip and the amount of deflection generated.

■ Single-guide type

* Single-guide specifications can only be used with vertical loads.

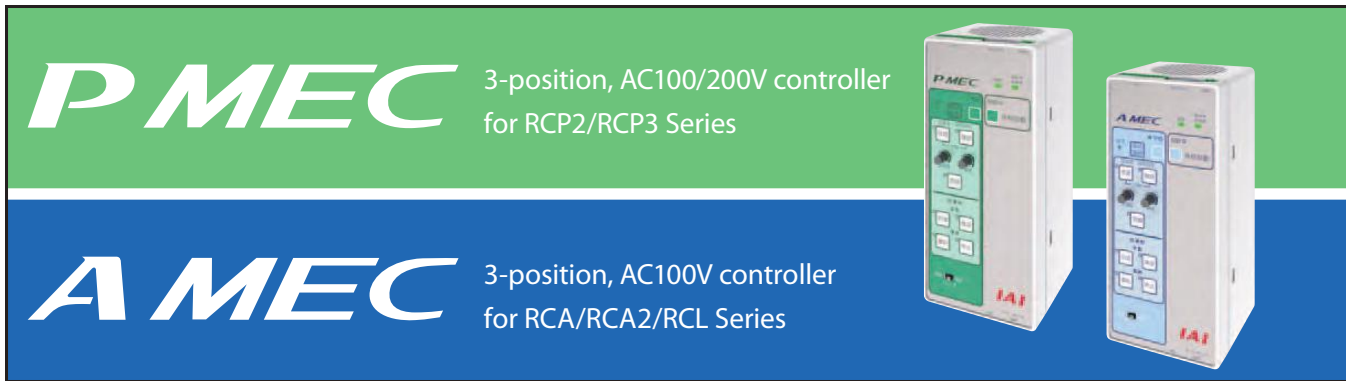

■ Double-guide type

(Vertical)

(Horizontal)

ROBO Cylinder 3-position controller MEC (Mechanical Engineer Control)

Feature

1 Low Cost

The MEC package, which combines a controller, power supply, acceleration/speed change function and PC connection cable, among others, is at an affordable price. The MEC PC software can be downloaded free of charge from IAI's website.

2 Easy Operation

Even a beginner can set up the controller without reading the operation manual. The acceleration and speed can be adjusted using the knobs on the controller.

* The setting range for acceleration/speed varies depending on the actuator. Please refer to the instruction manual for further detail.

3 Easy Replacement from your Air-cylinder System

Operation signals are exactly the same as those used to operate air cylinders. This means that you can use the program of your current PLC directly.

4 Push-motion Operation/Intermediate Stopping

Push-motion operation can be performed in the same manner as you would with any air-cylinder system. Also, you can cause the actuator to stop at any desired intermediate point between the home position and stroke end by changing the setting of the intermediate point using the MEC PC software.

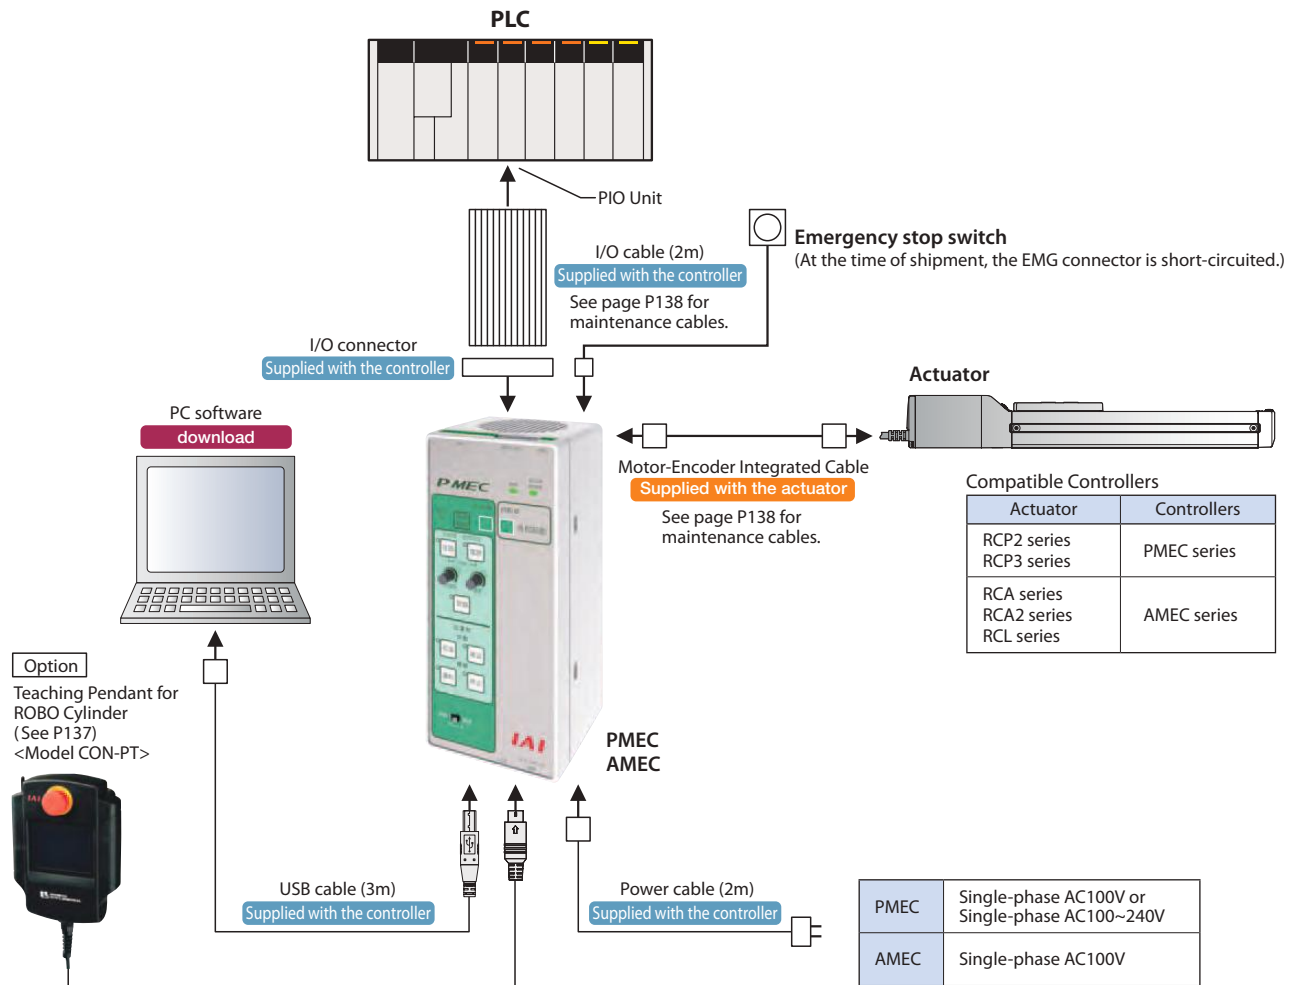

Model List

9	White		HEND (Homing complete)	LS2 (intermediate point detection)/PE2 (intermediate positioning complete)*1
10	Black		*ALM (alarm)*2	*ALM (alarm)*2

*1: Signals PE0 through PE2 will be output if the pushing motion was enabled in the initial setting. Otherwise, LS0 through LS2 will be output.
 *2: *ALM is ON when normal, and OFF when it is activated.

MEC PC software

By using the MEC PC software you can change the stop position data or run a test operation. In addition, you can change the setting on the intermediate stop function, pushing function or change the coordinates.

The MEC PC software can be downloaded from the IAI website.

IAI Website: www.intelligentactuator.com

Explanation of PIO Patterns

PIO Pattern (2-position travel)

This motion pattern is between two positions, the home position and the end position. The home and end positions can be configured numerically (using the MEC PC software or the optional touch panel teaching pendant). Two motions are possible: A positioning motion moves the rod or the slider to the specified position, and a pushing motion presses the rod against a workpiece.

Positioning

Input Signal

ST0	Solenoid A	ON
-----	------------	----

When ST0 is turned ON, the slider/rod moves at 50mm/s to the end position (30mm position).

End Position Data

Position	30mm
Speed	50mm/s
Pushing Force	—
Width	—

Input Signal

ST0	Solenoid A	OFF
-----	------------	-----

When ST0 is turned OFF, the slider/rod returns to the home position (0mm position) at 20mm/s.

Home Position Data

Position	0mm
Speed	20mm/s
Pushing Force	—
Width	—

PIO Pattern (2-position travel)

This motion pattern is between two positions, the home position and the end position, which enables a pushing motion of the rod against a workpiece.

Push

Input Signal

ST0	Solenoid A	ON
-----	------------	----

When ST0 is turned ON, the actuator moves the rod to the 20mm position at 80mm/s, and from there, pushes it at slower speed to the 30mm position.

End Position Data

Position	30mm
Speed	80mm/s
Pushing Force	50%
Width	10mm

* The pushing motion is performed when there is a numerical value in the controller's push force data. (If there is no numerical value, a positioning motion is performed instead.)

PIO Pattern (3-position travel)

This motion pattern enables moves between three positions: the end position and the home position, as well as an intermediate position.

The positions are switched by combining two signals, ST0 and ST1.

Positioning

Input Signal

ST0	Solenoid A	ON
ST1	Solenoid B	OFF

When only ST0 is turned ON, the actuator moves to the starting position at a set acceleration and speed.

Input Signal

ST0	Solenoid A	ON*
ST1	Solenoid B	ON*

When both ST0 and ST1 are turned ON, it will move to the intermediate position at the set acceleration and speed. When both are turned OFF, it stops at the current position.

* You can also configure the initial settings so that the rod will move to the intermediate position with both signals turned OFF, and stop at the current position with both signals turned ON.

Input Signal

ST0	Solenoid A	OFF
ST1	Solenoid B	ON

When only ST1 is turned ON, the actuator moves to the end position at a set acceleration and speed.

Specifications Table

Item	Type		
	PMEC		AMEC
Controller Type	PMEC		AMEC
Connectible Actuators	RCP2/RCP3 Series Actuators		RCA/RCA2/RCL Series Actuators
Number of Controllable Axes	Single axis		
Operation Method	Positioner Type		
Number of Positions	2 positions / 3 positions		
Backup Memory	EEPROM		
I/O Connector	10-pin terminal block		
I/O Points	4 input points / 4 output points		
Power for I/O	Externally supplied DC24V±10%		
Serial Communication	RS485: 1ch/USB: 1ch		
Position Detection Method	Incremental encoder		
Power Supply Voltage	AC100V-115V±10%	AC90V~264V	AC100V-115V±10%
Rated Current	1.3A	0.67A (AC100V)/0.36A (AC200V)	2.4A
Rush Current	30A	15A (AC100V)/30A (AC200V)	15A
Leak Current	0.50mA max	0.40mA max (AC100V) 0.75mA max (AC200V)	0.50mA max
Dielectric Strength Voltage	DC500V 1MΩ		
Vibration Resistance	XYZ directions 10~57Hz One-side amplitude 0.035mm (continuous), 0.075mm (intermittent) 57~150Hz 4.9m/s ² (continuous), 9.8m/s ² (intermittent)		
Ambient Operating Temperature	0~40°C		
Ambient Operating Humidity	10~85% RH (non-condensing)		
Ambient Operating Atmosphere	Free from corrosive gases		
Protection Class	IP20		
Weight	500g	508g	614g

Note: The minimum/maximum speeds vary depending on the actuator model. For more information, see the instruction manual, or contact IAI.

Outer Dimensions

Names of Parts and Functions

- 1 PIO connector** Connects with a PLC or other external controllers to communicate inputs and outputs (I/O).
- 2 Power LED** When the power is ON, it illuminates in green.
- 3 Control panel** See below
- 4 Brake switch**

Release	Used to release the brake of the actuator
Normal	The controller automatically controls the brake of the actuator
- 5 USB connector** When using MEC PC software, connect to the computer via USB.
- 6 AC inlet** Insert the power supply cable.
- 7 EMG connector** Connect the emergency stop button. Short-circuit it if you will not be using an emergency stop button.
- 8 M/PG connector** Insert the motor/encoder cable that connects with the actuator.
- 9 Status LED**

RUN (Green)	Indicates the servo status. On = Servo ON, Off=Servo OFF (Energy-saving) status Flashing (1Hz)=Auto servo OFF
ALM (Red) EMG (Red)	The LED illuminates if an alarm is turned ON or if the controller has come to an emergency stop.
- 10 SIO Connector** Connects with the teaching pendant (CON-PT, SEP-PT).

Explanation of the Control Panel

HOME button
When starting, homing is performed first to confirm the 0mm coordinate.

Manual button
Press this button to set the acceleration and/or speed, or to run a test operation. (Press for at least 1 second)

AUTO button
Press this button when operating from the MEC PC software or the PLC commands. (Press for at least 1 second)

Acceleration/Speed Settings
Configure the actuator's motion.

FWD POS / BACK POS button
Switch the motion you want to configure (see types below).
FWD POS: Motion toward the end position
BACK POS: Motion toward the home position
Middle: Motion toward an intermediate position (Enabled from the MEC PC software and switched on by simultaneously pressing "FWD POS" and "BACK POS" buttons to switch. During a 2-position stop, simultaneous pressing is disabled.)

Acceleration / Speed knob
By turning the knob, you can change the speed between 1%~100% of the actuator's maximum speed or rated acceleration / deceleration.
* The minimum speed may be less than 1% in some cases.

SAVE button
Saves the speed and acceleration adjusted above.

Test Operation
Confirm the saved motion by physically running the actuator.

FWD button
In a 2-position travel, the actuator moves from the BACK position to the FWD position. In a 3-position travel, the actuator moves from the BACK position to the intermediate position, then to the FWD position.

BACK button
The actuator returns to the home position.

RUN button
In a 2-position travel, the actuator moves back and forth between the FWD and BACK positions. In a 3-position travel, the actuator repeats its movement from the BACK position, intermediate position, FWD position, then BACK position.

STOP button
Stops the above operation.

Option

CON-PTA Touch-panel Teaching Pendant for Position Controller

Developed based on the design of the popular CON-PT series adopting an easy-to-use interactive touch-panel menu screen, this new data input device supports various functions offered by the PCON-CA controller.

CON-PTA

1. Color screen for greater ease of view
2. Supporting the takt time minimization function and maintenance information checking/ input functions of the PCON-CA
3. Position, parameters and other data can be saved in a SD card
4. Built-in clock function records the date & time of each event; data can then be saved in a SD card.

Model Numbers/Specifications

Item	Description		
Model number	CON-PTA-C-ENG	CON-PDA-C-ENG	CON-PGA-C-S-ENG
Type	Standard type	Enable switch type	Safety-category compliant type
Connectable controllers	ACON/PCON/SCON/RACON/RPCON ASEP/PSEP AMEC/PMEC ERC2 (*1)/ERC3		
3-position enable switch	×	○	○
Functions	<ul style="list-style-type: none"> • Position data input/editing • Moving function (moving to set positions, jogging/inching) • Parameter editing • Monitoring (current position, current speed, I/O signals, alarm code, alarm generation time) • Saving/reading data to/from external SD cards (position data parameters, alarm list) • Takt time minimization function • Maintenance information (total number of movements, total distance travelled, etc.) 		
Display	65536 colors (16-bit colors), white LED backlight		
Ambient operating temperature/humidity	0 to 40°C, 85% RH or less (Non-condensing)		
Environmental resistance	IP40 or equivalent		
Mass	Approx. 570g		Approx. 600g
Cable length	5m		
Accessories	Stylus	Stylus	Stylus, TP adapter (Model number: RCB-LB-TG) Dummy plug (Model number: DP-4) Controller cable (Model number: CB-CON-LB005)

*1 Among the ERC2 series, only the actuators bearing 4904 or greater number stamped on the serial number label can be connected.

Mini Slider
Mini Rod
Mini Table
Mini Linear Servo
Controller

Feature

1 Can operate with the same signal as a solenoid valve.

The signal that operates the actuator is the same as the signal that operates the air cylinder. Therefore, the PLC program currently in use can be used without modification even if the air cylinder is replaced by an electric-powered cylinder. Either a single solenoid or a double solenoid may be used.

2 Establishes a dustproof type that supports IP53.

We provide dustproof type controllers with an IP53 equivalent (*1) protection structure, so that the controller can be mounted outside the control panel. (*1) The bottom surface is excluded.

3 Provides the simple absolute type that can be operated immediately upon power-ON without homing.

Since the simple absolute type can store the current position with the assistance of the absolute battery unit during power-up or after the emergency stop is deactivated; it can start the next operation at that position.

(Note 1) When the actuator is connected to the simple absolute type controller, the model is considered an incremental model.
(Note 2) It can not be used for the linear servo type.

When mounting the absolute battery unit, mount it below the SEP controller to prevent heat damage.

4 Pushing and intermediate stop operation is available.

Like air cylinders, the pushing operation is available. In this operation, you can stop with a rod being pushed to a workpiece. Since the force for the push operation is adjustable within a range between 20 to 70 % of the maximum pushing force and a signal is generated when it reaches the specified pushing force, it can be used to perform such tasks as clamping the workpiece or determine its size.

Push force can be adjusted from 20 to 70% of the maximum push force.

5 Easy data entry with the dedicated touch panel teaching unit.

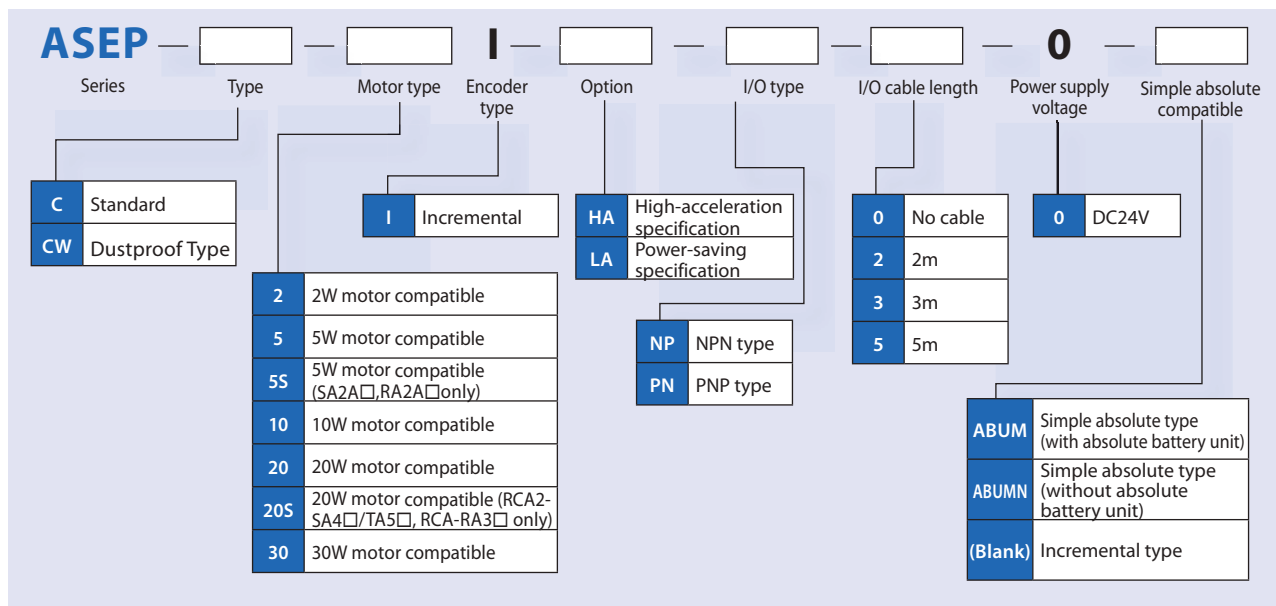

Data, such as setting target positions or pushing force, are easily entered with the optional touch panel teaching unit model: CON-PTA. Since the touch panel teaching unit provides an interactive menu and can be controlled directly on the screen, you can operate intuitively with no assistance from operation manuals.

- Mini Table type
- Mini Linear Servo type
- Controller

PIO Pattern Description

The SEP controller provides the following six PIO patterns from which you can choose for operation. Also, PIO patterns 0 to 2 support both the single solenoid and double solenoid signal configurations.

PIO pattern number		0		1		2		3		4		5		
PIO pattern name		Standard 2-position movement		Moving speed change		Position data change		2-input 3-position travel		3-input 3-position travel		Continuous cycle operation		
Feature		2-position motion		2-position motion		2-position motion		3-position motion		3-position motion		Continuous motion between 2 positions		
		Push		Push		Push		Push		Push		Push		
Supported solenoid configurations		Single		Single		Single		—		—		—		
		Double		Double		Double		—		—		—		
Input		0	Motion signal	Motion signal 1	Motion signal	Motion signal 1	Motion signal	Motion signal 1	Motion signal 1	Retract motion signal	Retract motion signal	Continuous operation signal		
		1	Pause signal	Motion signal 2	Pause signal	Motion signal 2	Pause signal	Motion signal 2	Motion signal 2	Extend motion signal	Extend motion signal	Pause signal

*For details of the signals listed above, see the Controller User's Manual. (Can be downloaded from our corporate website.)

PIO pattern 0 (Standard 2-position travel)

This PIO pattern involves movements between two positions—the end position and the home position. The positions can be set numerically to any position (by inputting to the controller using the PC software or the optional touch panel teaching pendant). Two motions are possible: A "positioning motion" moves the rod or the slider to the specified position, and a "pushing motion" pushes the rod against a workpiece.

Positioning motion (single solenoid)

End position data	
Position	30
Speed	100
Push force	—
Width	—

Input signal

Input	Signal
Input 0	ON
Input 1	—
Input 2	—
Input 3	—

When Input 0 is turned ON, the slider/rod moves to the end position (30mm coordinate) at a speed of 100mm/s.

Home position data	
Position	0
Speed	50
Push force	—
Width	—

Input signal

Input	Signal
Input 0	OFF
Input 1	—
Input 2	—
Input 3	—

When input 0 is turned OFF, the slider/rod returns to the home position (0mm coordinate) at a speed of 50mm/s.

Positioning motion (double solenoid)

End position data	
Position	30
Speed	100
Push force	—
Width	—

Input signal

Input 0	OFF
Input 1	ON
Input 2	—
Input 3	—

When Input 1 is turned ON and Input 0 is turned OFF, the slider/rod moves to the end position (30mm coordinate) at a speed of 100mm/s.

Home position data	
Position	0
Speed	50
Push force	—
Width	—

Input signal

Input 0	ON
Input 1	OFF
Input 2	—
Input 3	—

When Input 0 is turned ON and Input 1 is turned OFF, the slider/rod returns to the home position (0mm coordinate) at a speed of 50mm/s.

Push motion (single solenoid)

End position data	
Position	30
Speed	100
Push force	50
Width	10

Input signal

Input 0	ON
Input 1	—
Input 2	—
Input 3	—

When Input 0 is turned ON, the rod moves to the 20mm position at 100mm/s, and then starts pushing from the 20mm position to the 30mm position at slow speed.

*The pushing motion is performed only if there is a numerical value for the pushing force in the controller's position data. (If there is no numerical value for the pushing force, a positioning motion will be performed instead.)

Push motion (double solenoid)

End position data	
Position	30
Speed	100
Push force	50
Width	10

Input signal

Input 0	OFF
Input 1	ON
Input 2	—
Input 3	—

When Input 1 is turned ON and Input 0 is turned OFF, the rod moves to the 20mm position at 100mm/s, and then starts pushing from the 20mm position to the 30mm position at slow speed.

*The pushing motion is performed only if there is a numerical value for the pushing force in the controller's position data. (If there is no numerical value for the pushing force, a positioning motion will be performed instead.)

PIO pattern 1 (Speed Change during movement)

This PIO pattern involves movements between two positions—the end position and the home position. The speed can be changed in 2 stages. (The speed can be either increased or decreased.) The speed change occurs when the rod/slider passes the speed change position, specified in the position values.

(Single solenoid)

Input signal

Input 0	ON
Input 1	—
Input 2	ON
Input 3	—

When Input 0 is turned ON while Input 2 is turned ON, the rod moves at the initial speed up to the speed change position. After it passes the speed change position, the speed changes. If Input 2 is not turned ON, the speed will not change.

Home position data	
Position	0
Speed	50
Speed change position	12
Changed speed	100
Push force	—
Width	—

End position data	
Position	30
Speed	100
Speed change position	12
Changed speed	50
Push force	—
Width	—

PIO pattern 2 (position change)

This PIO pattern involves movements between two positions—the end position and the home position. You can set 2 sets of data for the end / home positions, speed, pushing force, and pushing width. Switching between the 2 sets of data can be done by turning ON/OFF Input 2, which is the signal for switching the target position.

(Single solenoid)

Input signal

Input 0	ON
Input 1	—
Input 2	ON
Input 3	—

If Input 2 (position change signal) is OFF when Input 0 is turned ON, the rod moves according to the position and speed set in "End Position Data 1" (position: 30 / speed: 100). If Input 2 is ON when Input 0 is turned ON, the rod's movement changes to the position and speed set in "End Position Data 2" (position: 20 / speed: 50). If Input 2 is OFF when the movement starts, but is turned ON in transit, the target position and speed is changed from that position.

End position data 1	
Position	30
Speed	100
Push force	—
Width	—

End position data 2	
Position	20
Speed	50
Push force	—
Width	—

PIO pattern 3 (2-input 3-position travel)

This PIO pattern involves movements between 3 positions—the end position, the home position, and an intermediate position. Changing between the positions is done by a combination of 2 signals, Input 0 and Input 1.

Positioning motion

Input signal

Input 0	ON
Input 1	OFF
Input 2	—
Input 3	—

When only Input 0 is turned ON, the rod moves to the home position at the specified speed.

Input signal

Input 0	ON
Input 1	ON
Input 2	—
Input 3	—

When Input 0 and Input 1 are both turned ON, the rod moves to the intermediate position at the specified speed.

Input signal

Input 0	OFF
Input 1	ON
Input 2	—
Input 3	—

When only Input 1 is turned ON, the rod moves to the end position at the specified speed.

PIO pattern 4 (3-input 3-position travel)

This PIO pattern involves movements between 3 positions—the end position, the home position, and an intermediate position. Changing between positions is done by three signals—Input 0, Input 1 and Input 2, which are commanded to move to the home, end and intermediate positions, respectively.

Positioning motion

Input signal

Input 0	ON
Input 1	OFF
Input 2	OFF
Input 3	—

When Input 0 is turned ON, the rod moves to the home position at the specified speed.

Input signal

Input 0	OFF
Input 1	OFF
Input 2	ON
Input 3	—

When Input 2 is turned ON, the rod moves to the intermediate position at the specified speed.

Input signal

Input 0	OFF
Input 1	ON
Input 2	OFF
Input 3	—

When Input 1 is turned ON, the rod moves to the end position at the specified speed.

PIO pattern 5 (continuous cycle operation)

This PIO pattern involves continuous cycling between 2 positions—the end and home positions. When Input 0 (continuous operation signal) is turned ON, the rod continuously moves between the specified 2 positions. If Input 0 is turned OFF while in motion, it stops after reaching the current destination.

Positioning motion

Input signal

Input 0	ON
Input 1	—
Input 2	—
Input 3	—

When Input 0 is turned ON, the rod moves continuously between the end and home positions at the specified speed.

Amount of heat generated		8.4W			9.6W		
Dielectric strength voltage		DC500V 1MΩ					
Vibration resistance		XYZ directions	10~57Hz One-side width 0.035mm (continuous), 0.075mm (intermittent) 58~150Hz 4.9m/s ² (continuous), 9.8m/s ² (intermittent)				
Ambient operating temperature		0 to 40°C					
Ambient operating humidity		10~85% RH (non-condensing)					
Ambient operating atmosphere		Free from corrosive gases					
Protection Class		IP20	IP53 (*7)	IP20	IP53 (*7)		
Weight		Approx. 130g	Approx. 160g	Approx. 130g	Approx. 160g		

(*1) Upon power-ON, an electrical current of 5 to 12 times as much as the rated current, called "in rush current" flows for 1 to 2 ms. Note that the amount of inrush current varies based on the impedance of power source lines.
 (*2) This applies to the case where two position data points are set at each of the end and home positions during a "position change" motion pattern process.
 (*3) The simple absolute type controllers cannot be used for the linear servo type.
 (*4) After the motor power has been turned on, the motor is excited and it performs a phase detection operation. During this time, the current will maximized. (Generally for about 100ms)
 However, if after the motor power is off, it is turned on again, approximately 6.0A current will flow. (For approximately 1~2 ms)
 (*5) The current will be maximized when the motor is excited and it performs a phase detection operation or during a collision or a motion constraint. The phase detection operation can take up to 10 seconds during which it is necessary to require the listed current.
 (*6) The current will be maximized during acceleration, deceleration, a collision, or a motion constraint. The longest time will be during a collision or a motion constraint. The listed current is required until an overload is detected.
 (*7) The bottom surface is excluded.

Option

CON-PTA Touch-panel Teaching Pendant for Position Controller

Developed based on the design of the popular CON-PT series adopting an easy-to-use interactive touch-panel menu screen, this new data input device supports various functions offered by the PCON-CA controller.

1. Color screen for greater ease of view
2. Supporting the takt time minimization function and maintenance information checking/ input functions of the PCON-CA
3. Position, parameters and other data can be saved in a SD card
4. Built-in clock function records the date & time of each event; data can then be saved in a SD card.

CON-PTA

Model Numbers/Specifications

Item	Description		
	CON-PTA-C-ENG	CON-PDA-C-ENG	CON-PGA-C-S-ENG
Model number	Standard type	Enable switch type	Safety-category compliant type
Type	ACON/PCON/SCON/RACON/RPCON ASEP/PSEP AMEC/PMEC ERC2 (*1) /ERC3		
Connectable controllers	×	○	○
3-position enable switch			
Functions	<ul style="list-style-type: none"> • Position data input/editing • Moving function (moving to set positions, jogging/inching) • Parameter editing • Monitoring (current position, current speed, I/O signals, alarm code, alarm generation time) • Saving/reading data to/from external SD cards (position data parameters, alarm list) • Takt time minimization function • Maintenance information (total number of movements, total distance travelled, etc.) 		
Display	65536 colors (16-bit colors), white LED backlight		
Ambient operating temperature/humidity	0 to 40°C, 85% RH or less (Non-condensing)		
Environmental resistance	IP40 or equivalent		
Mass	Approx. 570g		Approx. 600g
Cable length	5m		
Accessories	Stylus	Stylus	Stylus, TP adapter (Model number: RCB-LB-TG) Dummy plug (Model number: DP-4) Controller cable (Model number: CB-CON-LB005)

*1 Among the ERC2 series, only the actuators bearing 4904 or greater number stamped on the serial number label can be connected.

CON-PT-M
CON-PD-M
SEP-PT

CON-PG-M-S

* Please note that the CON-PG-M-S has a controller insertion connector that is different from the other models.

Wiring Diagram of CON-PGA-C-S

Option

PC software (Windows only)

Features This startup support software provides functions to input positions, perform test operations and monitor data, among others. Incorporating all functions needed to make adjustments, this software helps shorten the initial startup time.

Model **RCM-101-MW**
(With external equipment communication cable + RS232 conversion unit)

Configuration

Model **RCM-101-USB**
(With external equipment communication cable + USB conversion adapter + USB cable)

Configuration

Absolute battery unit for SEP controllers

Description Supplied with the PSEP and ASEP simple absolute controllers. This is a battery unit used for backing up the current position data.

Model **SEP-ABU** (standard type)
SEP-ABU-W (dustproof type)

Specifications

Item	Specifications			
Ambient operating temperature and humidity	0 to 40°C (about 20°C preferred), 95% RH or below (non-condensing)			
Ambient operating environment	Free from corrosive gases			
Absolute battery (*1)	Model: AB-7(Ni-MH battery/approx. 3-year life)			
Controller-absolute battery unit cable (*1)	Model: CB-APSEP-AB005 (length 0.5m)			
Weight	Standard type: approx. 230g / Dustproof type: approx. 260g			
Allowable encoder RPM during data retention (*2)	800rpm	400rpm	200rpm	100rpm
Position data retention time (*2)	120h	240h	360h	480h

(*1) The absolute battery unit comes with a cable to connect the controller and the absolute battery unit.

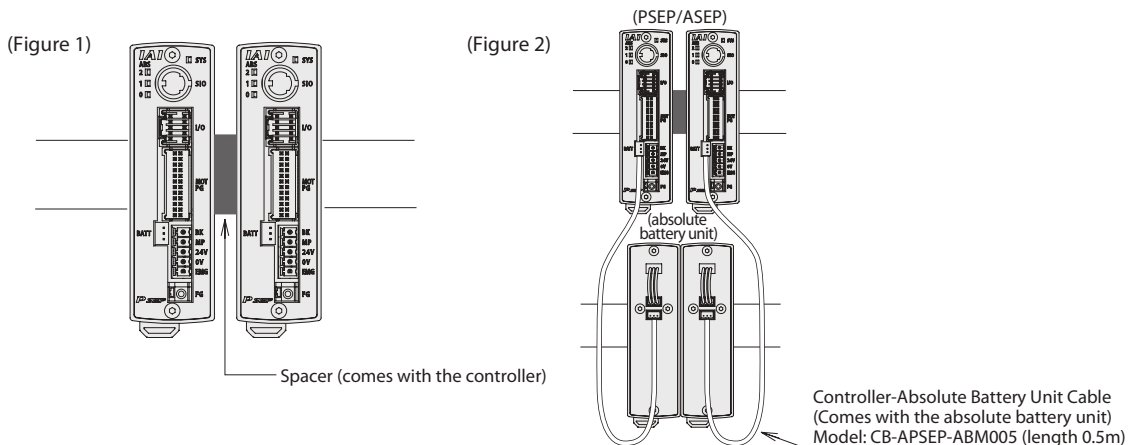

(*2) Position data retention time changes with the allowable encoder RPMs during data retention.

(800rpm→120h, 400rpm→240h, 200rpm→360h, 100rpm→480h)

Precautions related to controllers and options:

- When mounting the controller to a DIN rail, use the supplied spacer between the controllers to prevent them from contacting each other, to deal with heat dissipation. (See Fig. 1)
- When mounting the absolute battery units and controllers, place the absolute battery units below the controllers. (See Fig. 2) If there is not enough space below the controllers, mount the absolute battery units in such a way that the temperature around the controllers stays at 40°C or below.

Maintenance parts

Please refer to the models listed below when arrangements such as cable replacement are needed after purchasing the product.

(RCP3/RCA2/RCL) - (PSEP/ASEP) Integrated motor-encoder connection cable

Model **CB-APSEP-MPA**

* indicated the cable length (L)
Lengths up to 20m can be specified Example) 080=8m

Minimum bend radius $r = 68\text{mm}$ or larger (when movable unit is used)

Mechanical side Pin number		Controller side Pin number

I/O cable for PSEP-C/ASEP-C

Model **CB-APSEP-PIO**

* indicated the cable length (L)
Lengths up to 10m can be specified Example) 080=8m

No.	Signal	Color	Wiring
1	24V	Brown	Flat Cable (crimped)
2	0V	Red	
3	IN0	Orange	
4	IN1	Yellow	
5	IN2	Green	
6	IN3	Blue	
7	OUT0	Purple	
8	OUT1	Gray	
9	OUT2	White	
10	OUT3	Black	

I/O cable for PSEP-CW/ASEP-CW

Model **CB-APSEPW-PIO**

* indicated the cable length (L)
Lengths up to 10m can be specified Example) 080=8m

No.	Signal	Color	Wiring
1	24V	Brown	Cable (crimped)
2	0V	Brown-White	
3	IN0	Red	
4	IN1	Red-White	
5	IN2	Yellow	
6	IN3	Yellow-White	
7	OUT0	Green	
8	OUT1	Green-White	
9	OUT2	Black	
10	OUT3	Black-White	

Mini Slider type
Mini Rod type
Mini Table type
Mini Linear Servo type
Controller

SCON-CA

RCS2/RCS3/Single-axis Robot/
Linear Servo Actuator Position Controller

Feature

1 Supporting major field networks <Optional function>

Direct connection is now possible not only to DeviceNet, CC-Link (*1) and PROFIBUS-DP, but also to MECHATROLINK, CompoNet, EtherCAT and EtherNet/IP. The actuator can also be operated by specifying coordinate values directly via a field network.
(*1) CC-Link was changed from remote I/O to remote device.

2 Vibration control function <Standard function>

A vibration control function has been added that suppresses vibration of the work part installed on the slider when the actuator's slider moves. This function shortens the time the actuator waits for vibration to settle, and consequently shortens the cycle time.

3 Checking when to maintain based on the total number of movements and total distance travelled <Standard function>

The total number of actuator movements and the total distance travelled are calculated and recorded in the controller, and when the predetermined count or distance is exceeded, a signal is output to an external device. You can use this function to check when the actuator needs re-greasing or periodic inspection.

4 Keeping the alarm generation times with the calendar function <Standard function>

The clock function has been added to facilitate the analysis of the alarms because the time and date of each alarm that has occurred is now shown on the alarm history screen. (The time and date data is retained for 10 days.)

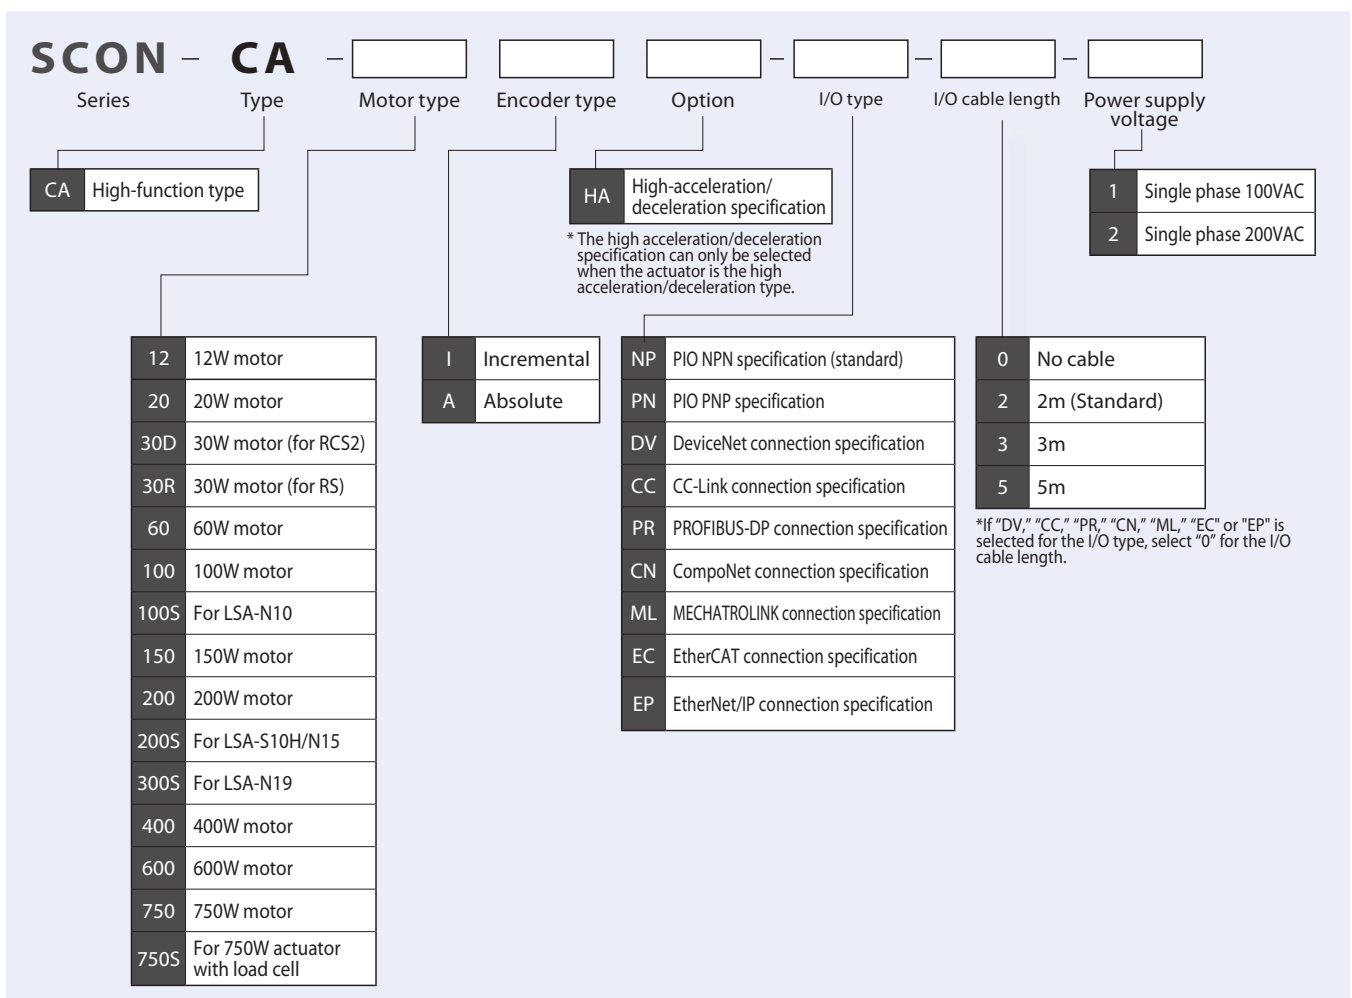

Details of the SCON-CA Controllers

List of Models

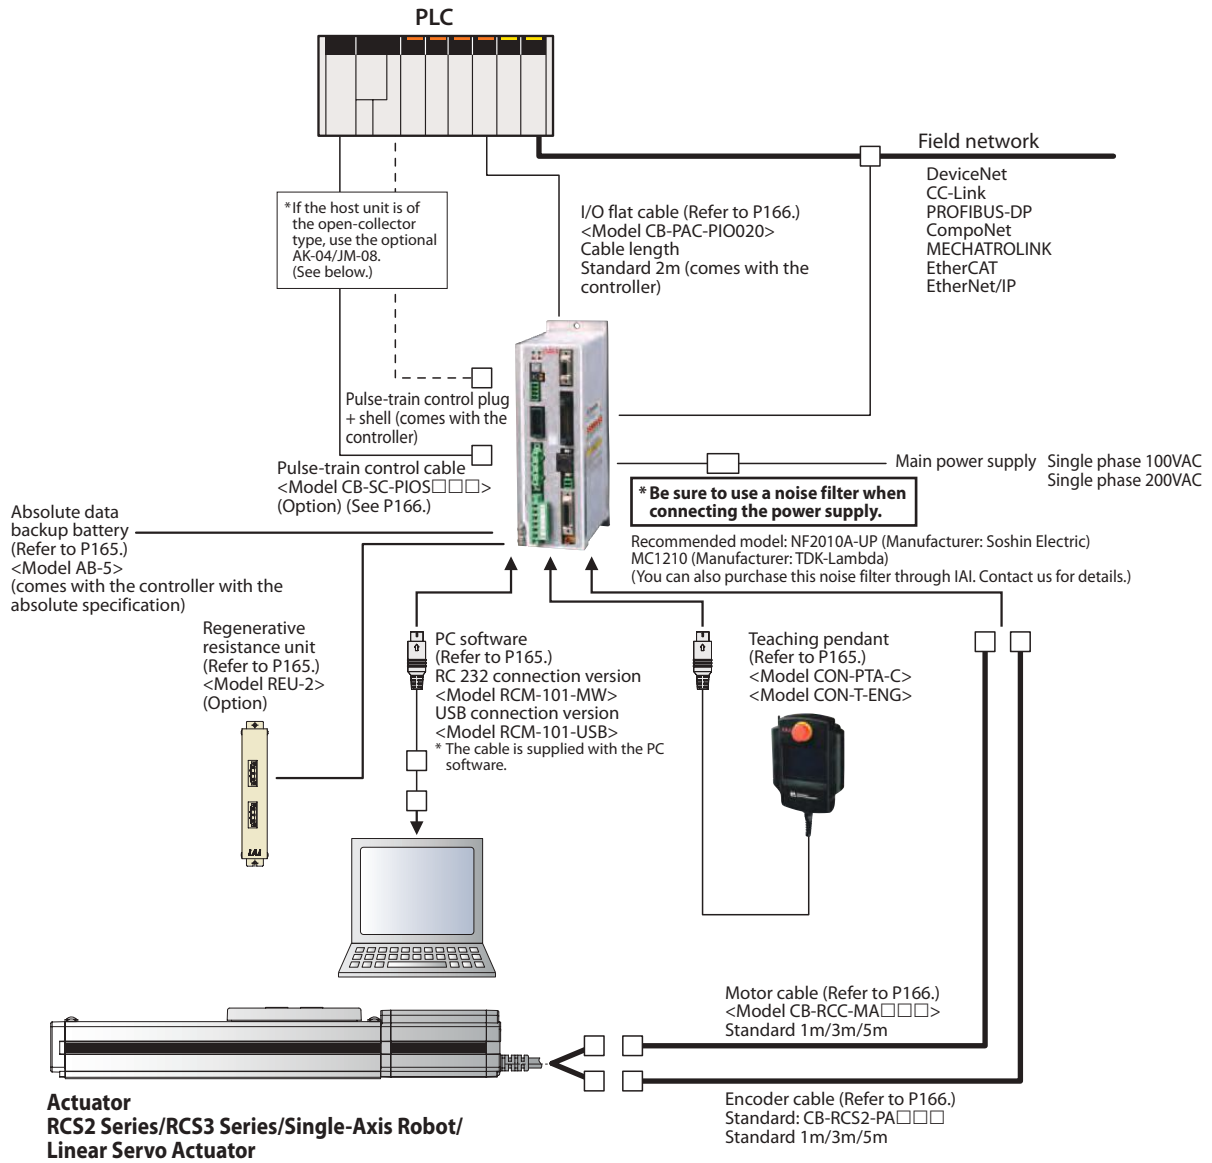

Model		SCON-CA								
External view										
I/O type		Standard specification		Network connection specification (optional)						
I/O type specification		PIO connection specification (*1)		DeviceNet	CC-Link	PROFIBUS-DP	CompoNet	MECHATROLINK	EtherCAT	EtherNet/IP
I/O type code		NP/PN		DV	CC	PR	CN	ML	EC	EP
Applicable encoder type		Incremental	Absolute	Incremental/Absolute						
Standard price	20~150W	—	—	—	—	—	—	—	—	—
	200W	—	—							
	300~400W	—	—							
	600W	—	—							
	750W	—	—							
	750W (for force control)	—	—							

(*1) If the controller is operated in the pulse-train mode, only an incremental encoder can be used. *The network connection specification type will not be able to operate with the PIO or Pulse train mode.

Model

System Configuration

● Pulse Converter: AK-04

Open-collector command pulses are converted to differential command pulses. Use this converter if the host controller outputs open-collector pulses.

■ Specification

Item	Specification
Input power	24 VDC±10% (Max. 50mA)
Input pulse	Open-collector (Collector current: 12mA max.)
Input frequency	200kHz or less
Output pulse	Differential output (10mA max.) (26C31 or equivalent)
Mass	10g or less (excluding cable connectors)
Accessories	37104-3122-000L (e-CON connector) x 2 Applicable wire: AWG Nos. 24 to 26

● Pulse Converter: JM-08

Difference feedback pulses are converted to open-collector feedback pulses. Use this converter if the host controller inputs open-collector pulses.

■ Specification

Item	Specification
Input power	24 VDC±10% (Max. 50mA)
Input pulse	Differential input (10 mA max.) (conforming to RS422)
Input frequency	500kHz or less
Output pulse	24-VDC open-collector (Collector current: 25mA max.)
Mass	10g or less (excluding cable connectors)
Accessories	37104-3122-000FL (e-CON connector) x 2 Applicable wire: AWG Nos. 24 to 26

Operation Modes

With this controller, you can select a desired control method from the two modes of positioner mode and pulse-train control mode. In the positioner mode, you can enter position data (target position, speed, acceleration, etc.) in the controller under the desired numbers and then specify each number externally via an I/O (input/output signal) to operate the actuator. Also, in the positioner mode, you can select the desired operation mode from the eight modes using the parameter. In the pulse-train control mode, you can control the travel, speed, acceleration, etc., by sending pulses from an external pulse generator.

Mode		Number of positioning points	Features
Positioner mode	Positioning mode	64 points	Standard factory-set mode. Specify externally a number corresponding to the position you want to move to, to operate the actuator.
	Teaching mode	64 points	In this mode, you can move the slider (rod) via an external signal and register the stopped position in the position data table.
	256-point mode	256 points	In this mode, the number of positioning points available in the positioning mode has been increased to 256 points.
	512-point mode	512 points	In this mode, the number of positioning points available in the positioning mode has been increased to 512 points.
	Solenoid valve mode 1	7 points	In this mode, the actuator can be moved only by turning signals ON/OFF, just like you do with an air cylinder of solenoid valve type.
	Solenoid valve mode 2	3 points	In this mode, the output signal is set to the same as the air cylinder auto switch in the solenoid valve mode.
	Force mode 1	32 points	In this mode, you can move to positions under force control in the positioning mode. (Up to 32 positioning points are available.)
	Force mode 2	5 points	In this mode, you can move to positions under force control in the solenoid valve mode. (Up to five positioning points are available.)
Pulse-train control mode		—	There is no need to enter position data in the controller, and the customer can operate the actuator freely based on custom control.

I/O Signal Table * You can select one of nine types of I/O signal assignments.

* In the above table, signals in () represent functions available before the home return.
 * In the above table, signals preceded by * are turned OFF while the actuator is operating.

Explanation of the I/O Signal Functions

The table below explains the functions assigned to the controller's I/O signals. The available signals vary depending on the controller type and settings, so use the signal table of each controller to check the functions available with that controller.

Category	Signal abbreviation	Signal name	Description of function
Input	CSTR	PTP strobe (start signal)	The actuator starts moving to the position set by the command position.
	PC1~PC256	Command position number	The position number of the target position is input (binary input).
	BKRL	Forced brake release	The brake is forcibly released.
	RMOD	Operation mode switching	The operation mode can be switched when the MODE switch on the controller is in the AUTO position. (The switch position is AUTO when this signal is OFF, or MANU when the signal is ON.)
	*STP	Pause	The actuator will decelerate to a stop when this signal turns OFF while the actuator is moving. The remaining movement will be suspended while the actuator is stopped and the movement will resume once the signal turns ON.
	RES	Reset	The alarm will be reset when the signal turns ON. The remaining travel can be cancelled by turning this signal ON while the actuator is paused (*STP is OFF).
	SON	Servo ON	The servo is ON while this signal is ON, and remains OFF while this signal is OFF.
	HOME	Home return	When this signal turns ON, the actuator performs home return operation.
	MODE	Teaching mode	When this signal turns ON, the actuator switches to the teaching mode. (Switching will not occur if CSTR, JOG+ and JOG- are all OFF and the actuator is still moving.)
	JISL	Jog/inch switching	When this signal turns OFF, the actuator can be jogged with JOG+ and JOG-. When the signal is ON, the actuator can be inched with JOG+ and JOG-.
	JOG+, JOG-	Jog	When the JISL signal is OFF, the actuator starts jogging in + or - direction upon detection of the ON edge of this signal. If the OFF edge of this signal is detected during jogging, the actuator decelerates to a stop.
	PWRT	Current position write	In the teaching mode, specify a position and then turn this signal ON for at least 20ms, and the current position will be written to the specified position.
	ST0~ST6	Start signal	In the solenoid valve mode, the actuator moves to the specified position when this signal turns ON. (The start signal is not required.)
	CLBR	Load cell calibration command	Load cell calibration starts when this signal has remained ON for at least 20ms.
Output	PEND/INP	Positioning complete	This signal turns ON when the actuator enters the in-position band after movement. If the actuator exceeds the in-position band, the PEND signal does not turn OFF, but the INP signal turns OFF. PEND and INP can be switched using a parameter.
	PM1~PM256	Complete position number	The position number of the position reached at the end of positioning is output (binary output).
	HEND	Home return completion	This signal turns ON upon completion of home return.
	ZONE1/ZONE2	Zone	This signal turns ON if the current actuator position is within the range set by the parameter.
	PZONE	Position zone	This signal turns ON when the current actuator position enters the range set in the position data table after position movement. This signal can be used with ZONE1, but PZONE becomes effective only when moving to a specified position.
	RMDS	Operation mode status output	The operation mode status is output. This signal turns ON when the controller is in the manual mode.
	*OVLW	Overload warning	This signal is ON in a normal condition, and turns OFF when the overload warning level is exceeded. (Operation will continue.)
	*ALML	Minor failure alarm	This signal is ON in a normal condition, and turns OFF when a message-level alarm occurs. (Operation will continue.)
	*ALM	Alarm	This signal is ON when the controller is in a normal condition, and turns OFF when an alarm occurs.
	MOVE	Moving	This signal is ON while the actuator is moving (also during home return and push-motion operation).
	SV	Servo ON	This signal is ON while the servo is ON.
	*EMGS	Emergency stop output	This signal is ON when no emergency stop is actuated on the controller, and turns OFF when an emergency stop is actuated.
	*BALM	Absolute battery voltage low warning	If the controller is of the absolute specification, this signal turns OFF when the voltage of the absolute battery drops. (Operation will continue.)
	MODES	Teaching mode output	This signal turns ON when the actuator enters the teaching mode via MODE signal input. It turns OFF once the actuator returns to the normal mode.
	WEND	Write complete	This signal is OFF immediately after switching to the teaching mode, and turns ON once writing is completed according to the PWRT signal. When the PWRT signal turns OFF, this signal also turns OFF.
	PE0~PE6	Current position number	This signal turns ON when the actuator has completed moving to the target position in the solenoid valve mode.
	CEND	Load cell calibration complete	This signal turns ON upon completion of load cell calibration. When the CLBR signal turns OFF, this signal also turns OFF.
LOAD	Load output judgment signal	During push-motion operation, this signal is output when the current value set for the "threshold" is exceeded within the range of "Zone+" and "Zone-" set in the position data table. The signal is used to determine if press-fitting action has been performed correctly.	
TRQS	Torque level output	This signal is output when the motor current reaches the current value set for the "threshold" in the position data table after the slider (rod) has collided with an obstacle, etc., during movement in push-motion operation.	
LS0~LS2	Limit switch output	This signal turns ON when the current actuator position enters the in-position band set before and after the target position. If the home return has already completed, this signal is output even before a movement command is issued or while the servo is OFF.	

* In the above table, signals preceded by * are normally ON and turn OFF while the actuator is operating.

I/O Wiring Diagram

● Positioning mode/Teaching mode/
Solenoid valve mode

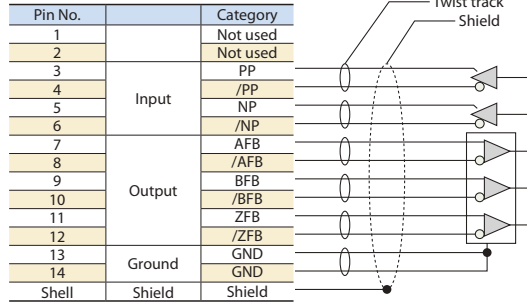

PIO connector (NPN specification)

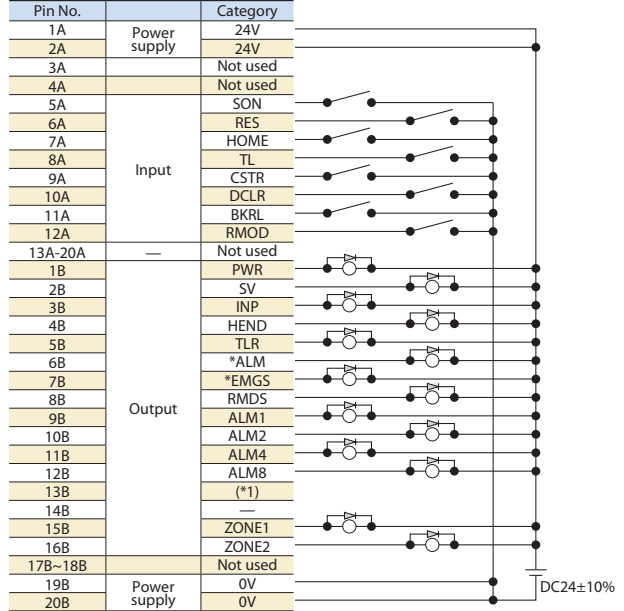

*Connect Pins 1A and 2A to 24V, and Pins 19B and 20B to 0V.

● Pulse Train Mode (Differential Output)

Pulse connector

PIO connector (NPN specification)

* Be sure to connect to the shell the shield of the twist track cable connected to the PULSE connector. Also **keep the cable length to 10m or less.**

* Connect Pins 1A and 2A to 24V, and Pins 19B and 20B to 0V
(*1)-*ALML/*OVLW/*BALM (switchable with parameters)

I/O Specification

● Input Part External Input Specifications

Item	Specification
Input voltage	24VDC±10%
Input current	4mA/1 circuit
ON/OFF voltage	ON voltage: 18VDC min. OFF voltage: 6VDC max.
Isolation method	Photocoupler

NPN specification

PNP specification

● Output Part External Output Specifications

Item	Specification
Load voltage	24VDC
Maximum load current	100mA/1 point, 400mA/8 points
Leak current	0.1mA max./1 point
Isolation method	Photocoupler

NPN specification

PNP specification

Pulse-Train Type I/O Specification (Differential Line Driver Specification)

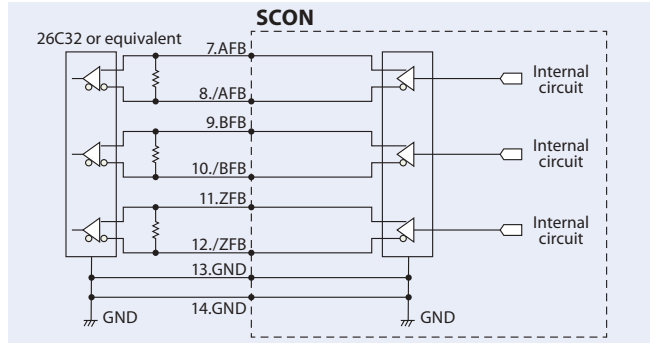

Input Part

Maximum number of input pulses : Line driver interface 2.5Mpps
Isolation method : Photocoupler isolation

Output Part

Maximum number of output pulses : Line driver interface 2.5Mpps
Isolation/non-isolation : Non-isolation

Pulse-Train Type I/O Specification (Open-collector Specification)

The AK-04 (Options) is needed to input pulses. The JM-08 (Options) is needed to output pulses.

Maximum number of input pulses:
200kpps (The AK-04 is needed.)
Maximum number of output pulses:
200kpps (The JM-08 is needed.)

- * The 24-VDC power supply connected to the AK-4 must be shared with the PIO interface.
- * Keep the length of the cable connecting the pulse output unit (PLC) and AK-04/JM-08 as short as possible. Also keep the cable between the AK-04/JM-08 and **PULSE connector to 2m or less.**

Note

Use the same power supply for open collector input/output to/from the host and for the AK-04, JM-08.

Command Pulse Input Patterns

Command pulse train pattern		Input terminal	Forward	Reverse	
Negative logic	Forward pulse-train	PP./PP			
	Reverse pulse-train	NP./NP			
	A forward pulse-train indicates the amount of motor rotation in the forward direction, while a reverse pulse-train indicates the amount of motor rotation in the reverse direction.				
	Pulse-train	PP./PP			
	Sign	NP./NP	Low	High	
	The command pulse is used for the amount of motor rotation, while the sign indicates the rotating direction.				
Positive logic	Phase A/B pulse-train	PP./PP			
		NP./NP			
	Command phases A and B having a 90° phase difference (multiplier is 4) indicate the amount of rotation and the rotating direction.				
	Forward pulse train	PP./PP			
	Reverse pulse-train	NP./NP			
Positive logic	Pulse-train	PP./PP			
	Sign	NP./NP	High	Low	
	Phase A/B pulse-train	PP./PP			
	NP./NP				

Specification Table

Item	Specification	
Applicable motor capacity	Less than 400W	400W or more
Connected actuator	RCS2/RCS3 series actuator/single-axis robot/linear servo actuator	
Number of controlled axes	1 axis	
Operation method	Positioner type/pulse-train type	
Number of positioning points	512 points (PIO specification), 768 points (fieldbus specification)	
Backup memory	Nonvolatile memory (FRAM)	
I/O connector	40-pin connector	
Number of I/O points	16 input points/16 output points	
I/O power supply	Externally supplied 24VDC±10%	
Serial communication	RS485 1ch	
Peripherals communication cable	CB-PAC-PIO□□□	
Command pulse-train input method (Note 1)	Differential line driver output supported	
Maximum input pulse frequency	Differential line driver method: 2.5Mpps max./Open-collector method (pulse converter used): 200kpps max.	
Position detection method	Incremental encoder/absolute encoder	
Emergency stop function	Available (built-in relay)	
Forced electromagnetic brake release	Brake release switch ON/OFF	
Input power supply	Single-phase AC90V to AC126.5V Single-phase AC180V to AC253V	Single-phase AC180V to AC253V
Power-supply capacity (Note 2)	20W/74VA 30W (other than RS)/94VA 30W (RS)/186VA 60W/186VA 100W/282VA 150W/376VA 200W/469VA	100W (LSA-N10)(*)/331VA 200W (LSA-S10H, N15S)(*)/534VA 200W (LSA-N15H)(*)/821VA 300W (LSA-N19)(*)/710VA 400W/968VA 600W/1212VA 750W/1569VA
Vibration resistance	XYZ directions – 10 to 57Hz: Single amplitude 0.035mm (continuous), 0.075mm (intermittent) 58 to 150Hz: 4.9 m/s ² (continuous), 9.8 m/s ² (intermittent)	
Ambient operating temperature	0 ~ 40°C	
Ambient operating humidity	85%RH or less (non-condensing)	
Operating ambience	Not exposed to corrosive gases	
Protection degree	IP20	
Mass	Approx. 900g (+ 25g for the absolute specification)	Approx. 1.2kg (+ 25g for the absolute specification)
External dimensions	58mm (W) x 194mm (H) x 121mm (D)	72mm (W) x 194mm (H) x 121mm (D)

(Note 1) For the command pulse input method, use the differential line driver method resistant to noise. If the open-collector method must be used, use the optional pulse converter (AK-04/JM-08) to convert open-collector pulses to differential pulses.

(Note 2) Controllers operating any of the actuator models denoted by (*) shall conform to the external dimensions of controllers for 400 W or more, even when the output is less than 400W.

External dimensions

Options

Teaching Pendant

- Features This teaching device offers position input, test operation, monitoring and other functions.
- Model **CON-PTA-C** (Touch panel teaching pendant)
CON-T-ENG (Standard Type teaching pendant)
- Configuration

- CON-T options
 - Wall-mounting hook Model: **HK-1**

Specification

Item	CON-PTA-C	CON-T-ENG
Data input	○	○
Actuator operation	○	○
Ambient operating temperature/humidity	Temperature 0 to 40°C, humidity 85%RH or less	
Operating ambience	Free from corrosive gases or significant powder dust	
Protection degree	IP40	IP54
Mass	Approx. 570g	Approx. 400g
Cable length	5m	
Display	65,536 colors White LED backlight	20 characters x 4 lines LCD display
Standard price	—	—

PC Software (Windows Only)

- Features This startup support software provides functions to input positions, perform test operations and monitor data, among others. Incorporating all functions needed to make adjustments, this software helps shorten the initial startup time.
- Model number **RCM-101-MW** (With external device communication cable + RS232 conversion unit)
- Configuration

- Model number **RCM-101-USB** (With external device communication cable + USB adapter + USB cable)
- Configuration

Regenerative Resistance Unit

- Features This unit converts regenerative current that generates when the motor decelerates, to heat. Check the total wattage of the actuators to be operated and provide a regenerative resistance unit or units if required.

* If two regenerative units are required, arrange one REU-2 and one REU-1.

- Model **REU-2** (for SCON/SSEL)
- Specification

Unit mass	0.9Kg
Built-in regenerative resistor	220Ω 80W
Unit-controller connection cable (supplied)	CB-SC-REU010 (for SSEL)

■ Guide for Required Quantity

	Horizontal	Vertical
0 unit	~ 100W	~ 100W
1 unit	~ 400W	~ 400W
2 unit	~ 750W	~ 750W

■ Guide for Required Quantity (RCS2-RA13R only)

	Lead 2.5	Lead 1.25
Horizontal	1 unit	0 unit
Vertical	1 unit	1 unit

* The required regenerative resistance may be more than as specified above depending on the operating conditions.

* The required regenerative resistance may be more than as specified above depending on the operating conditions.

■ External Dimensions

Absolute Data Backup Battery

- Features Absolute data backup battery used when an actuator of absolute specification is operated.
