

RoboCylinder Standard & Cleanroom Types
with Battery-less Absolute Encoder

RCP5/RCP5CR Series

**ROBO
CYLINDER**

Battery-less
Absolute

Introducing the RCP5 Series, powered by a battery-less actuator, with the convenience of an absolute encoder and the cost and simplicity of an incremental encoder

The innovative battery-less absolute encoder (patent pending) operates through a combination of gears to read the rotational position data. This eliminates the need for the battery that is normally required for a conventional absolute encoder. This means there is no longer a need for battery replacement, with the associated costs and adjustments.

Slider Type

Rod Type

Radial Cylinder

Can carry radial loads.

Added to the Series: Side-mounted Motor and Belt Types

Compared to the existing model (RCP2-BA), the belt type is:

- Available with a maximum stroke of 2600mm
- Equipped with a standard stainless steel dust cover
- 1.5 times greater maximum speed and maximum payload

Side-mounted
Motor Type

Belt Type

Slider Type

Rod Type (Radial Cylinder)

RCP5-RA4R/RA6R/RA7R

RCP5-BA4/BA6/BA7

Cleanroom
Type

RCP5CR-SA7C

RCP5CR-SA6C

RCP5CR-SA4C

The RoboCylinder is Easy to Use!!!

Problem Solving

Manufacturing Site Problems and Solutions

Air Cylinder Problems

- 1 Reduced operation rate due to choco-tei caused by position switch failure or air pressure fluctuations
- 2 Cycle time cannot be shortened when sudden stops limit the operating speed.

Electric Actuator (Incremental Type) Problems

- 1 After an emergency stop is reset, there is a long delay before the actuator returns to its home position or for an adjustment

Electric Actuator (Absolute Type) Problems

- 1 Higher cost
- 2 Battery replacement time management is required
- 3 Battery replacement labor and cost

Electric Actuator Solutions (CT Effect)*

- 1 Choco-tei significantly reduced
- 2 Operating speeds are able to increase since there are no sudden stops

Absolute Type Solutions

- 1 Home return is not required

Battery-less Absolute Type Solutions

- 1 Battery is not required
- 2 Slider type offered at the same price as the incremental type in RCP4 Series

Problems solved with the RCP5 Series!

Battery-less
ABSOLUTE

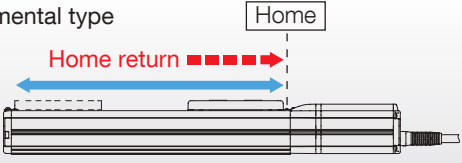

* The "CT Effect" refers to the increase in production volume per unit of time, which enables "shorter cycle-times" and "reduced choco-tei", due to reevaluating the configuration of the automated equipment.

Feature 1

The Battery-less Absolute Encoder

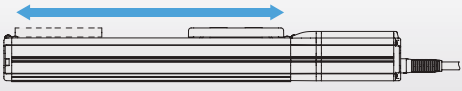

What is an absolute encoder?

Incremental type

Since position data is lost when the power is shut down, this type of encoder will not operate until it has established its home position.

Absolute type

This type of encoder will maintain its position data even when the power is shut off, and will resume operating from its current position when the power is switched on.

Advantages of an absolute encoder

- Advantage 1:** Home return is not required, which means reduced amount of labor and time required for adjustment when starting up the device.
- Advantage 2:** The amount of time required for adjustment after an emergency stop until operation resumes is reduced.

What is a battery-less absolute encoder?

The battery-less absolute encoder verifies its current position based on the linked gear positions. A conventional absolute encoder uses a battery to store its current position, but since the battery-less type has no need to store this data, the battery was eliminated.

Advantages of a battery-less absolute encoder

- Advantage 1:** More economical with no cost associated with battery replacement.
- Advantage 2:** Battery replacement management is no longer required. Labor for replacement work is also no longer required.
- Advantage 3:** Battery installation space is not required.
- Advantage 4:** Even if the cable between the controller and the actuator is replaced, operation will resume with no adjustments needed, since positioning data is read each time it operates.
- Advantage 5:** No external sensor, such as a sensor to check the origin, is required since home return is not necessary.
- Advantage 6:** IAI's slider type, even with the battery-less absolute encoder, is offered for the same price as the conventional incremental type in RCP4 series.

Service life of a battery-less absolute encoder

The mechanical configuration of the battery-less absolute encoder offers a service life that is approximately four times the actuator guide's standard rating. Furthermore, it can be used with a sense of security because it will output an error when a certain amount of wear in the gear section is detected.

The RoboCylinder is Easy to Use!!!

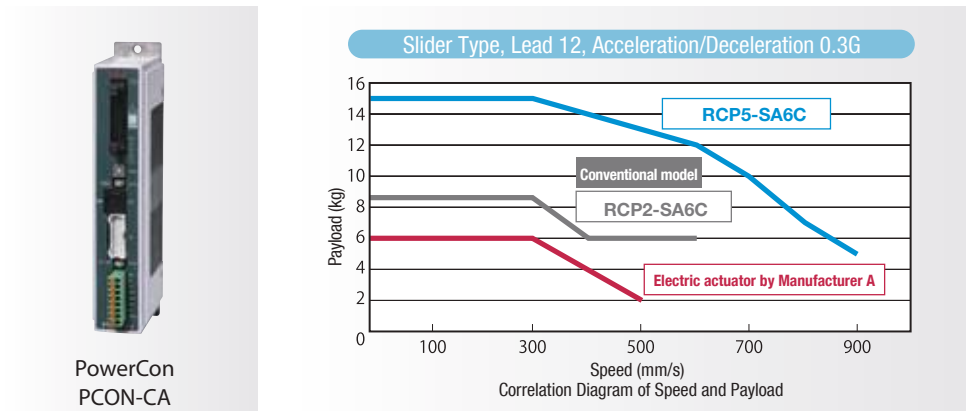

Feature **2**

1.5 Times Higher Maximum Speed and Double the Payload When Combined with a PowerCon

Shorter cycle time significantly boosts the productivity of your system

The new controller (PowerCon) is equipped with the newly developed high-output driver (patent pending) and has achieved significantly higher speeds up to 1.5 times more than IAI's conventional models. In addition, the payload is as much as two times greater, which are astonishing improvements in specifications (*). Furthermore the maximum speed does not drop as much even when the payload increases due to increased torque with the high speed motor, meaning that the dynamic performance equivalent to that of a higher-class model can be achieved at lower cost.

(*). The specific rates of improvement vary depending on the model.

Multi-axis type is now available with a PowerCon

Since the MSEP Controller uses the PowerCon specification, it has speeds up to 1.5 times higher and a payload of up to 2 times higher compared to the existing models, and can operate a maximum of four RCP5 axes at once. Also, if high-output capability is not used, maximum of eight axes is possible. In addition, the designated target location can be changed via the field network.

A Maximum of Four RCP5 Axes Can Be Operated at Once*

Compatible Field Networks

*Up to eight axes can be operated if PowerCon is not used.

Feature **3**

The Rod Type Can Carry **Radial Loads**.

The rod type <Radial Cylinder > with a built-in guide mechanism can carry radial loads over a long stroke of up to 800mm.

The rod type (Radial Cylinder) has a built-in ball circulating type linear guide mechanism, which allows it to carry radial loads and have a long stroke of up to 800mm. In addition, the actuator can support a radial load that is offset from the center of the rod.

Usage example 1 When a guide mechanism is required in a tight space

Usage example 2 When the rod needs to be straight

Feature **4**

Easier to Maintain

Once the frame cover is removed, both the ball screw and guide can be greased at the same time using the right and left grease nipples. (For the RCP5-RA8/RA10 models, apply grease directly to the grease nipples without removing the frame cover.)

Feature **5**

Added to the Series: Side-mounted Motor and Belt Type

In addition to the cleanroom type which is applicable for ISO Cleanliness Class 4, the side-mounted motor and belt types have been added in the series.

The RoboCylinder is Easy to Use!!!

Warnings when Selecting the Rod Attachment Option

When Selecting the Front Flange (FL)

- The front flange (FL) rod attachment option cannot be selected when the following strokes are selected for RCP5-RA4R/RA6R/RA7R;

- (1) RA4R: 60mm (standard) and 60~110mm (with brake)
- (2) RA6R: 65mm (with brake)
- (3) RA7R: 70mm (standard) and 70~120mm (with brake)

- Please be careful of nearby objects when selecting the front flange (FL) option for the RCP5-RA4R/RA6R/RA7R models, as selecting a short stroke may cause some interference between the cable and installation surface for certain strokes.

When Selecting the Tip Adapter Option (FFA, NFA, KFA)

- Please be careful of nearby objects when selecting the tip adapter option (FFA, NFA, KFA) for the RCP5-RA4R/RA6R/RA7R models, as selecting a short stroke may cause some interference between the cable and work piece for certain strokes.

Figure above shows the case of tip adapter (Flange=FFA).

Actuator Specifications

Item	Description
Drive system	Ball screw Ø8mm, rolled C10
Positioning repeatability	±0.02mm
Lost motion	0.1mm or less
Base	Material: Aluminum with white alumite treatment
Dynamic allowable moment (*1)	Ma: 4.98N·m, Mb: 7.11N·m, Mc: 9.68N·m
Static allowable moment	Ma: 8.6N·m, Mb: 12.2N·m, Mc: 16.7N·m
Ambient operating temperature, humidity	0 to 40°C, 85% RH or less (Non-condensing)

(*1) Assumes a standard rated life of 5000km.

• Reference for overhang load lengths / Ma: 120mm or less, Mb, Mc: 120mm or less

(Note)

The operational life will vary depending on operation and installation conditions. Please refer to the RC General Catalog for details on operational life, allowable moment direction, and overhang load length.

Dimensions

CAD drawings can be downloaded from the website.

www.robocylinder.de

- *1 When the slider is returning to its home position, please be careful of interference from surrounding objects, as it will travel until it reaches the ME.
- ME: Mechanical end
SE: Stroke end

Radial Load Applicable

* Depending on the model, there may be some limitations to using the vertical mount position. Please refer to P.59 for details.

- POINT**
Note on selection
- (1) The payload assumes operation at an acceleration of 0.1G for lead 5 and operation at an acceleration of 0.2G for lead 10 and lead 20. The above values are the upper limits of acceleration/deceleration.
 - (2) Please note that the RA8C requires a dedicated controller (high-thrust PCON-CFA).
 - (3) The radial cylinder is equipped with a built-in guide.

(*1) Rod's angular displacement in rotational direction with no applied load is shown.

Offset distance at end of rod (100mm or less)

Load at end of rod

CAD drawings can be downloaded from the website.

www.robocylinder.de

- *1 When the rod is returning to its home position, please be careful of interference from surrounding objects, as it will travel until it reaches the ME.
 - *2 The direction of width across flats varies depending on the product.
 - *3 If the actuator is installed using the front housing and flange, make sure the actuator will not receive any external force.
- ME: Mechanical end
SE: Stroke end

■ Dimensions with Flange (Option)

Note
If an actuator with lead 5 is installed vertically, the service life of the actuator varies significantly depending on its payload. Please refer to the correlation diagram of vertical load and traveling life shown below. (If the actuator is installed horizontally, its service life is not affected by the payload.)

■ Dimensions with Brake (Option)

■ 4 Cable Exit Directions (Option)

■ Rod Deflection of RCP5-RA8C

(The graph below shows the measurements of how much a horizontally installed rod would deflect when a load is applied to the end of the rod. The measured deflection includes the deflection due to the weight of the rod.)

Radial Load Applicable

* Depending on the model, there may be some limitations to using the vertical mount position. Please refer to P.59 for details.

- (1) The payload assumes operation at an acceleration of 0.01G for lead 2.5, operation at an acceleration of 0.02G for lead 5 and operation at an acceleration of 0.04G for lead 10. The above values are the upper limits of acceleration/deceleration.
- (2) Please note that the RA10C requires a dedicated controller (high-thrust PCON-CFA).
- (3) The radial cylinder is equipped with a built-in guide. Please refer to the graphs shown in P. 65 and after for the allowable load mass.

Correlation Diagrams of Vertical Load and Traveling Life

- Since the RCP5-RA10C has a greater maximum thrust than other types, its service life varies significantly depending on the payload and push force applied when the actuator is installed vertically. When selecting an appropriate type from the correlation diagram of speed and payload or correlation diagram of push force and current-limiting value, check its traveling life on the correlation diagram of payload and service life as well as on the correlation diagram of push force and service life.

Note
The rated value represents the maximum value at a traveling life of 5000km. The greatest value is the maximum value at which the actuator can operate. Take note that, if an actuator is operated beyond its rating, its service life will drop as shown by the applicable graph on the right.

Applicable Controllers

The RCP5 series actuators can be operated by the controllers indicated below. Please select the type depending on your intended use.

Name	External view	Model number	Maximum number of positioning points	Input power	Reference page

Radial Load Applicable

* Depending on the model, there may be some limitations to using the vertical mount position. Please refer to P.59 for details.

The figure above is the motor side-mounted to the left (ML).

- (1) The actuator specification displays the payload's maximum value, but it will vary depending on the acceleration. Please refer to the "Selection Guidelines" (RCP5 Payload by Speed/Acceleration Table) on P. 63.
- (2) Please refer to P. 59 for push-motion operation.
- (3) The radial cylinder is equipped with a built-in guide. Please refer to the graphs shown in P. 65 and after for the allowable load mass.

Radial Load Applicable

* Depending on the model, there may be some limitations to using the vertical mount position. Please refer to P.59 for details.

The figure above is the motor side-mounted to the left (ML).

POINT
Note on selection

- The actuator specification displays the payload's maximum value, but it will vary depending on the acceleration. Please refer to the "Selection Guidelines" (RCP5 Payload by Speed/Acceleration Table) on P. 63.
- Please refer to P. 59 for push-motion operation.
- The radial cylinder is equipped with a built-in guide. Please refer to the graphs shown in P. 65 and after for the allowable load mass.

RCP5-RA10R

RoboCylinder, High-thrust Rod Type, Side-mounted Motor Type, Actuator Width 108mm, 24V Pulse Motor

Model	RCP5-RA10R	WA	86P			P4			
Specification	Series	Type	Encoder type	Motor type	Lead	Stroke	Applicable controller	Cable length	Options
Items			WA: Battery-less absolute specification	86P: Pulse motor, size 86□	10: 10mm 5: 5mm 2.5: 2.5mm	50: 50mm 800: 800mm (Every 50mm)	P4: PCON-CFA	N: No cable P: 1m S: 3m M: 5m X□: Specified length R□: Robot cable	Please refer to the options table below.

Radial Load Applicable

* Depending on the model, there may be some limitations to using the vertical mount position. Please refer to P.59 for details.

The figure above is the motor side-mounted to the left (ML).

- POINT**
Note on selection
- The payload assumes operation at an acceleration of 0.01G for lead 2.5, operation at an acceleration of 0.02G for lead 5 and operation at an acceleration of 0.04G for lead 10. The above values are the upper limits of acceleration/deceleration.
 - Please note that the RA10R requires a dedicated controller (high-thrust PCON-CFA).
 - The radial cylinder is equipped with a built-in guide. Please refer to the graphs shown in P. 65 and after for the allowable load mass.

Correlation Diagrams of Vertical Load and Traveling Life

● Since the RCP5-RA10R has a greater maximum thrust than other types, its service life varies significantly depending on the payload and push force applied when the actuator is installed vertically. When selecting an appropriate type from the correlation diagram of speed and payload or correlation diagram of push force and current-limiting value, check its traveling life on the correlation diagram of payload and service life as well as on the correlation diagram of push force and service life.

Note
The rated value represents the maximum value at a traveling life of 5000km. The greatest value is the maximum value at which the actuator can operate.
Take note that, if an actuator is operated beyond its rating, its service life will drop as shown by the applicable graph on the right.

Applicable Controllers

The RCP5 series actuators can be operated by the controllers indicated below. Please select the type depending on your intended use.

Name	External view	Model number	Maximum number of positioning points	Input power	Reference page

RCP5-BA4/BA4U RoboCylinder, Belt Type, Actuator Width 40mm, Pulse Motor, Top-mounted Motor/Bottom-mounted Motor

Model	RCP5	WA	35P	48	P3				
Specification	Series	Type	Encoder type	Motor type	Lead	Stroke	Applicable controllers	Cable length	Options
Items	BA4: Belt type Top-mounted motor BA4U: Belt type Bottom-mounted motor	WA: Battery-less absolute specification	35P: Pulse motor, size 35□	48: Equiv. to 48mm	300: 300mm 1200: 1200mm (Every 100mm)	P3: PCON-CA MSEP MSEL	N: No cable P: 1m S: 3m M: 5m X□□: Specified length R□□: Robot cable	Please refer to the options table below.	

* Depending on the model, there may be some limitations to using the side and ceiling mount positions. Please refer to P.59 for details.

The figure above is the top-mounted motor type.

Correlation Diagram of Speed and Payload (when high-output setting of controller is enabled)

Due to a pulse motor used for RCP5 series, its payload gets lower when operated at higher speed. Please refer to this diagram below to make sure that the required payload will be met at the operation speed you desire.

- POINT**
Note on selection
- Please set the operation speed at 150mm/s or higher for the belt type as it may cause vibration or noise when used at lower speed.
 - Due to a pulse motor used for RCP5 series, its payload gets lower when operated at higher speed. Please refer to the correlation diagram of speed and payload on this page or to the selection table on P. 65 to make sure that the required payload will be met at the operation speed you desire.
 - The payload assumes operation at an acceleration of 0.5G. 0.5G is the upper limit of the acceleration.
 - Push-motion operation cannot be performed.

Warnings

- This model cannot be installed in the vertical mount position.
- Horizontal and ceiling mount specifications cannot be installed in the side position. Similarly, side mount specification cannot be installed in a horizontal or ceiling mount position.
- The maximum stroke for the side and ceiling mount positions is 1000mm.

* Depending on the model, there may be some limitations to using the side and ceiling mount positions. Please refer to

The figure above is the top-mounted motor type.

Correlation Diagram of Speed and Payload (when high-output setting of controller is enabled)

Due to a pulse motor used for RCP5 series, its payload gets lower when operated at higher speed. Please refer to this diagram below to make sure that the required payload will be met at the operation speed you desire.

- Please set the operation speed at 100mm/s or higher for the belt type as it may cause vibration or noise when used at lower speed.
- Due to a pulse motor used for RCP5 series, its payload gets lower when operated at higher speed. Please refer to the correlation diagram of speed and payload on this page or to the selection table on P. 65 to make sure that the required payload will be met at the operation speed you desire.
- The payload assumes operation at an acceleration of 0.5G. 0.5G is the upper limit of the acceleration.
- Push-motion operation cannot be performed.

Warnings

- This model cannot be installed in the vertical mount position.
- Horizontal and ceiling mount specifications cannot be installed in the side position. Similarly, side mount specification cannot be installed in a horizontal or ceiling mount position.
- The maximum stroke for the side and ceiling mount positions is 1000mm.

Applicable Controllers

The RCP5 series actuators can be operated by the controllers indicated below. Please select the type depending on your intended use.

Name	External view	Model number	Max. number of controlled axes	Maximum number of positioning points	Input power	Reference page
Positioner type (High-output specification)		PCON-CA-42PWAI-①-2-0	1	512 points	DC24V	→P. 69
Pulse train type (High-output specification)		PCON-CA-42PWAI-PL-②-2-0				
Field network type (High-output specification)		PCON-CA-42PWAI-③-0-0				
Solenoid valve multi-axis type (PIO specification)		MSEP-④-①-②-2-0	C: 8 (4 when high-output enabled) LC: 6 (3 when high-output enabled)	3 points		→P. 77
Positioner multi-axis type (Field network specification)		MSEP-④-①-③-0-0				
Program control multi-axis safety category type		MSEL-PG-1-42PWAI-①-2-4	4	30000 points	Single-phase AC 100V~230V	→P. 87
Program control multi-axis safety category type (w/ network board)		MSEL-PG-1-42PWAI-③-0-4				

*Above MSEL models are for single-axis specification *① I/O type (NP/PN) *③ Number of axes
 *② Field network specification code *④ N (NPN specification) or P (PNP specification) code
 *The high output enabled operation is only available when the "High-output setting specs" is selected in the MSEP-C/LC.

RCP5-BA7/BA7U RoboCylinder, Belt Type, Actuator Width 70mm, Pulse Motor, Top-mounted Motor/Bottom-mounted Motor

Model	RCP5	WA	56P	48		P3			
Specification	Series	Type	Encoder type	Motor type	Lead	Stroke	Applicable controllers	Cable length	Options
Items	BA7: Belt type Top-mounted motor BA7U: Belt type Bottom-mounted motor	WA: Battery-less absolute specification	56P: Pulse motor, size 56□	48: Equiv. to 48mm	300: 300mm 2600: 2600mm (Every 100mm)	P3: PCON-CA MSEP MSEL	N: No cable P: 1m S: 3m M: 5m X□: Specified length R□: Robot cable	Please refer to the options table below.	

* Depending on the model, there may be some limitations to using the side and ceiling mount positions. Please refer to

The figure above is the top-mounted motor type.

- Please set the operation speed at 100mm/s or higher for the belt type as it may cause vibration or noise when used at lower speed.
- Due to a pulse motor used for RCP5 series, its payload gets lower when operated at higher speed. Please refer to the correlation diagram of speed and payload on this page or to the selection table on P. 65 to make sure that the required payload will be met at the operation speed you desire.
- The payload assumes operation at an acceleration of 0.5G. 0.5G is the upper limit of the acceleration.
- Push-motion operation cannot be performed.

Correlation Diagram of Speed and Payload (when high-output setting of controller is enabled)

Due to a pulse motor used for RCP5 series, its payload gets lower when operated at higher speed. Please refer to this diagram below to make sure that the required payload will be met at the operation speed you desire.

Warnings

- This model cannot be installed in the vertical mount position.
- Horizontal and ceiling mount specifications cannot be installed in the side position. Similarly, side mount specification cannot be installed in a horizontal or ceiling mount position.
- The maximum stroke for the side and ceiling mount positions is 1000mm.

Actuator Specifications

Lead and Payload

Actuator Specifications

Item	Description
Drive system	Timing belt
Positioning repeatability	±0.08mm
Lost motion	0.1mm or less
Base	Material: Aluminum with white alumite treatment
Dynamic allowable moment (*1)	Ma: 33.2N·m, Mb: 33.2N·m, Mc: 72.3N·m
Static allowable moment	Ma: 80.7N·m, Mb: 80.7N·m, Mc: 175N·m
Ambient operating temperature, humidity	0 to 40°C, 85% RH or less (Non-condensing)

(*1) Assumes a standard rated life of 5000km.

• Reference for overhang load lengths / Ma: 180mm or less, Mb, Mc: 180mm or less

(Note)

The operational life will vary depending on operation and installation conditions. Please refer to the RC General Catalog for details on operational life, allowable moment direction, and overhang load length.

Dimensions

CAD drawings can be downloaded from the website.

www.robocylinder.de

*1 When the slider is returning to its home position, please be careful of interference from surrounding objects, as it will travel until it reaches the ME.
 ME: Mechanical end
 SE: Stroke end
 *The way to attach the actuator is to fix with screws from the top only.

*Above MSEL models are for single-axis specification *① I/O type (NP/PN) *② Number of axes
 *③ Field network specification code *④ N (NPN specification) or P (PNP specification) code
 *⑤ C or LC *⑥ V (NPN specification) or P (PNP specification) code
 *The high output enabled operation is only available when the "High-output setting specs" is selected in the MSEP-C/LC.

Warnings When Installing the Rod Actuators

When installing the front bracket or flange (optional), please be careful that the actuator does not experience any external force. (External force may cause malfunctions or damaged parts)
If the actuator will experience external force or is being used in conjunction with a Cartesian robot etc., please use the mounting holes on the base of the actuator to secure it into place.

Even in cases when external force will not be applied, to secure the actuator in place when installed horizontally using a flange or side-mounted motor specification, please use the bracket mounting holes to create a support base as shown in the diagram on the right.

About the Mounting Positions

- While installation in the side and ceiling mount positions are available, this may cause slack or misalignment in the stainless steel sheet. Continuing to use it this way could cause the stainless steel sheet to break. Please inspect it daily and adjust the sheet if any slack or misalignment is found.
- When installing the motor straight-type vertically, please set the motor on the top if possible. While installing the motor on the bottom will not cause problems in normal operation, long periods of no activity may cause the grease to separate, flow into the motor unit, and cause problems in rare occasions.

Belt Type Mounting Positions

Horizontal and ceiling mount specifications cannot be installed in the side position. Similarly, side mount specification cannot be installed in a horizontal or ceiling mount position. Tilted or vertical mount installations will cause operational failure, so please do not install it in these positions. The maximum stroke for the side and ceiling mount positions is 1000mm. Please do not attempt to use a product with a stroke of more than 1000mm in the side or ceiling mount positions.

Selection Guideline (Correlation Diagram of Push Force and Current-limiting Value)

In the push operation, the push force can be changed by changing the current force of the controller to be between 20%-70% (for SA4□ and RA4□, start from 30%). The maximum push force will vary depending on the model, so please refer to the graphs on the following pages and select one based on the needed push force for your intended use.

When using the push operation with the slider actuator, please limit the push current in order that the reactive moment caused by the push force does not exceed the dynamic allowable moment (M_a , M_b) specified in the catalog. Please refer to the figure on the right which shows the guide moment's active positions for help with calculating the moment. This can be done by considering the offset of the push force application position. Please note that if excessive force which exceeds the dynamic allowable moment is applied, it may damage the guide and shorten its operational life. Please keep this in mind and select a push current that is safely within its limits.

Calculation example:

If push-motion operation is performed with an RCP5-SA7C by applying 50N at the position shown to the right, the moment received by the guide, or

$$M_a, \text{ is calculated as } (46.5 + 50) \times 50 = 4825 \text{ (N}\cdot\text{mm)} \\ = 4.825 \text{ (N}\cdot\text{m)}.$$

Since the dynamic allowable moment of the SA7C is $M_a=10$ (N·m), since $10 \times 0.8 = 8 > 4.825$, this is an acceptable selection. Also, should an M_b moment occur due to the push operation, calculate the moment from the overhang and ensure that it is within range of the dynamic allowable moment.

Correlation Diagrams of Push Force and Current Limit

The graphs below are only a reference, and the graphs may vary slightly from the actual

SA4C/SA4R/RA4C/RA4R type

SA6C/SA6R/RA6C/RA6R type

SA7C/SA7R type

RA7C/RA7R type

RA8C/RA8R type

RA10C/RA10R type

Warnings

- The correlation between push force and current limit are strictly for reference purposes. Actual numbers may vary slightly.
- A current limit of less than 20% will cause the push force to vary, so please use a limit of higher than 20%.
- Using the push operation, these graphs assume a traveling speed of 10mm/s for the RA8C/RA8R/RA10C/RA10R models and a 20mm/s speed for all other models.
- Using the RA8C/RA8R models at a current limit of greater than 70% can cause the motor to burn out, so please use a limit of 60% or less.
- Please refer to the table below when determining the upper limit of push cycles when the RCP5-RA10C/RA10R models are operated at the maximum push force and a push travel distance of 1mm.

Lead (type)	2.5	5	10
Push cycles	1.4 million cycles	25 million cycles	157.6 million cycles

*The upper limit of push cycles varies depending on the impact, vibration and other operating conditions. The cycles shown to the left assume no impact or vibration.

Warnings for RCP5-RA10C/RA10R Models Using the Push Operation

The push force is limited on certain RA10C/RA10R models due to its relationship with the buckling load of the ball screw. (Refer to the table below.)

Items	Stroke 550mm or less	Stroke 600mm or less	Stroke 650mm or less	Stroke 700mm or less	Stroke 750mm or less	Stroke 800mm or less

Selection Guideline (Selecting the Allowable Load for the Radial Cylinder)

The radial cylinder has a built-in guide, so loads up to a certain level can be applied to the rod without using an external guide. Refer to the graphs below for the allowable load mass. If the allowable load will be exceeded under the required operating conditions, add an external guide.

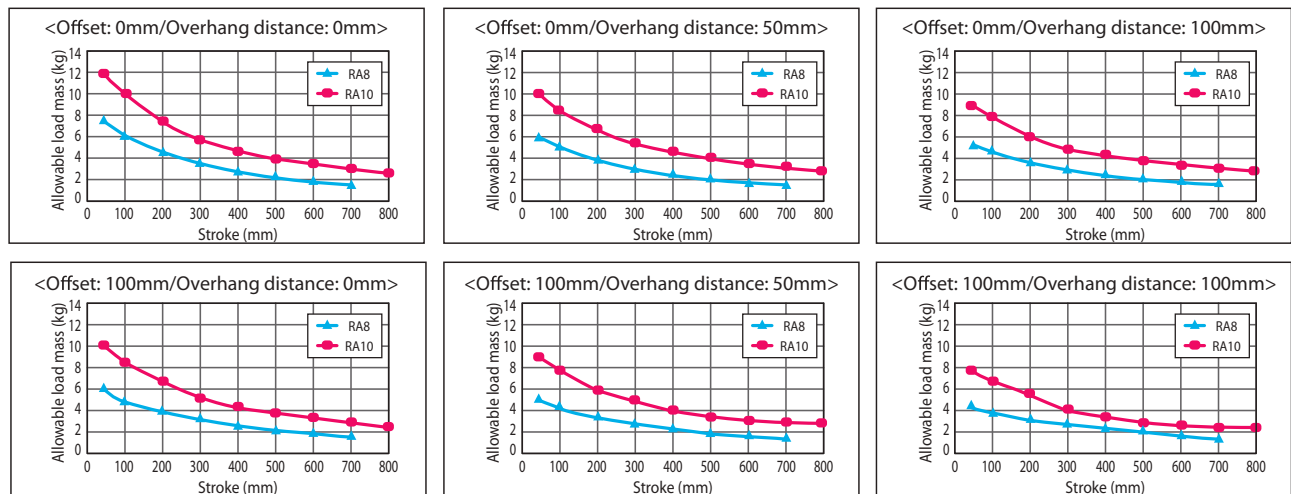

Allowable Load Mass for a Horizontally Mounted RCP5

System Configuration

Single-axis Specification → Refer to P. 69

Multi-axis Specification (8-axis Specification/6-axis Specification with PLC Control Function) → Refer to P. 77

Option

PC compatible software
(Refer to P. 86)
RS232 connection type
<Model number: RCM-101-MW>
USB connection type
<Model number: RCM-101-USB>

*The PowerCon (high-output driver) and Mini Cylinder are supported by Ver. 9.06.00.00 or later.

This cable comes with the PC compatible software

This cable comes with the absolute battery box.

Option
Absolute battery box
<Model number: MSEP-ABB>
Replacement battery
<Model number: AB-7>

Option
Teaching pendant
(Refer to P. 86)
<Model number: TB-02-C>

*If the "Simple absolute type" is selected for the controller model, the absolute battery box will come with the controller. (Refer to page 85 for its dimensions)

PLC

Field network
DeviceNet, CC-Link, PROFIBUS-DP, CompoNet, EtherCAT, EtherNet/IP, PROFINET IO

PIO flat cable
Refer to P. 90)
<Model number: CB-MSEP-PIO020>
Standard length: 2m
Comes with any PIO spec. controller

*You can choose either the PIO specification or field network specification for your controller.

*To connect to a field network, you must set up the controller communications using the gateway parameter setting tool that comes with the PC software. Please purchase the PC software if you don't already have it.

*Field network connection cables are the responsibility of the customer.

Controller
(Refer to P. 77)
<Model number: MSEP-C>
<Model number: MSEP-LC>

<Connectable Actuators>

Integrated motor-encoder cable
<Model number: CB-PSEP-MPA□□□>
Standard lengths: 1m/3m/5m
(Refer to P. 90)

Supplied with the actuator

Actuator RCP2 Series

*The RCP2-RTBS/RTCS are excluded.

Actuator RCP2, Small Rotary
(RCP2-RTBS/RTCS)

Integrated motor-encoder cable
<Model number: CB-RPSEP-MPA□□□>
Standard lengths: 1m/3m/5m
(Refer to P. 90)

Supplied with the actuator

*Please note that 360 degree rotation specification (RCP2-RT□SL/RT□L/RT□BL) is not supported.

Actuator RCP4 Series

Integrated motor-encoder cable
<Model number: CB-CA-MPA□□□>

Integrated motor-encoder robot cable
<Model number: CB-CA-MPA□□□-RB>
Standard lengths: 1m/3m/5m
(Refer to P. 89)

Supplied with the actuator

Actuators indicated in green are of the pulse motor specification.
Actuators indicated in blue are of the servo motor specification.
Actuators indicated in orange are of the BLDC servo motor specification.

Integrated motor-encoder cable
<Model number: CB-APSEP-MPA□□□>
Standard lengths: 1m/3m/5m
(Refer to P. 90)

Supplied with the actuator

Actuator RCA Series

Integrated motor-encoder cable
<Model number: CB-APSEP-MPA□□□>
Standard lengths: 1m/3m/5m
(Refer to P. 89)

Supplied with the actuator

Actuator RCP3 Series RCP2-GRSS/GRLS/GRST
RCP2-SRA4R/SRGS4R/SRGD4R
RCA2 Series RCL Series (Note 1)

(Note 1) Please note that the simple absolute specification is not supported for the RCL series.

Integrated motor-encoder cable
<Model number: CB-CAN-MPA□□□>

Integrated motor-encoder robot cable
<Model number: CB-CAN-MPA□□□-RB>
Standard lengths: 1m/3m/5m
(Refer to P. 89)

Supplied with the actuator

Integrated motor-encoder cable
(for RCP5-RA8C/8R/10C/10R)

Integrated motor-encoder robot cable
<Model number: CB-CFA3-MPA□□□>
<Model number: CB-CFA3-MPA□□□-RB>
Standard lengths: 1m/3m/5m
(Refer to P. 89)

Actuator RCP5 Series
RCD Series

1 The built-in high-output driver designed for the RCP5/RCP4 achieves greater torque when operated at high speed

The newly developed high-output driver (patent pending) has achieved significant improvements compared to the conventional model (RCP2 Series), with a 1.4 times higher acceleration rate, 1.5 times higher maximum speed, and twice as much in payload.

(*) The rates of improvement vary depending on the type.
(*) The RCP3/RCP2 are also supported.
(*) PCON-CA only

Acceleration/ deceleration	RCP2	0.7G	1.4 times
	RCP5	1.0G	
Maximum speed	RCP2	1000mm/s	1.5 times
	RCP5	1440mm/s	
Payload	RCP2	6kg	2 times
	RCP5	12kg	

2 Battery-less absolute encoder compatibility

The RCP5 equipped with a battery-less absolute encoder is supported. Since no battery is needed to retain position data, less space is required in the control panel, which in turn leads to lower cost of your equipment.

3 A common board leads to improved ease of maintenance

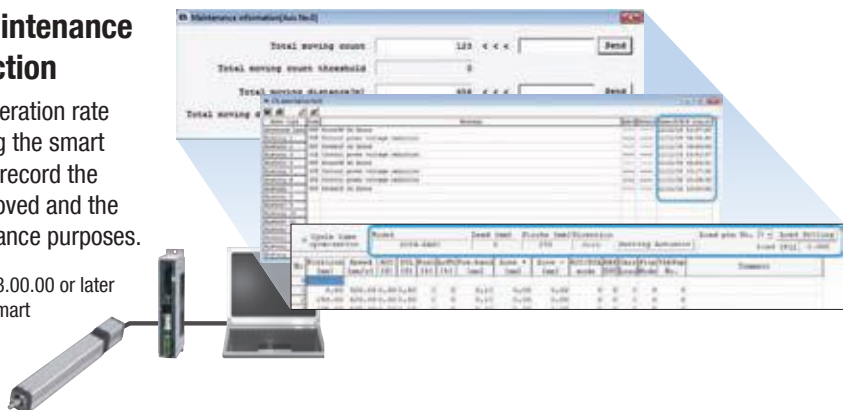

While conventional controllers require a separate set of boards for each actuator, the PCON-CA/CFA use common boards for all actuators, meaning that actuators of different models such as RCP5, RCP4, RCP3 and RCP2 can be operated simply by changing the controller settings. The result is significant reduction in maintenance stock.

4 Smart tuning function, maintenance information, calendar function

You are able to set the optimal acceleration rate based on the transport load, by using the smart tuning function. In addition, you can record the number of times the actuator has moved and the distance it has traveled, for maintenance purposes.

(*) You need PC compatible software Ver. 8.03.00.00 or later or a TB-02 (teaching pendant) to use the smart tuning function.

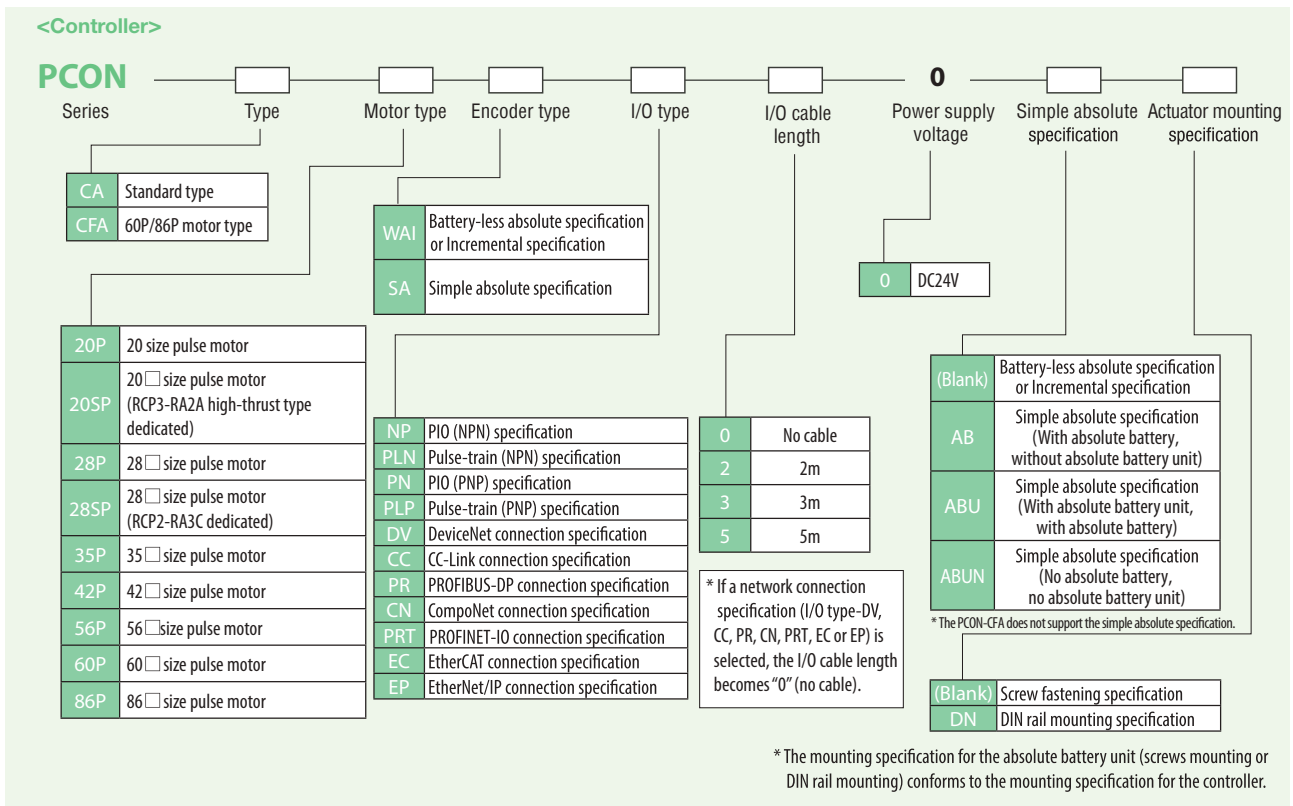

List of Models

Position Controllers for RoboCylinder: PCON-CA/CFA

I/O type		Positioner type	Pulse-train type (*1)	Field network type							
				DeviceNet	CC-Link	PROFIBUS	CompoNet	PROFINET	EtherCAT	EtherNet/IP	
I/O type model number		NP/PN	PLN/PLP	DV	CC	PR	CN	PRT	EC	EP	
PCON-CA	Battery-less absolute specification or Incremental specification	○	○	○	○	○	○	○	○	○	
	Simple absolute specification	with absolute battery	○	—	○	○	○	○	○	○	○
		with absolute battery unit	○	—	○	○	○	○	○	○	○
		No absolute battery	○	—	○	○	○	○	○	○	○
PCON-CFA	Battery-less absolute specification or Incremental specification	○	○	○	○	○	○	○	○	○	

(*1) If the RCP5 is used with pulse-train I/Os, the actuator must complete a home return prior to operation, as with any incremental actuator.

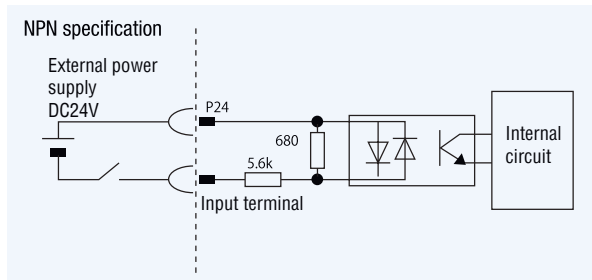

Model Specification Items

PIO I/O Interface

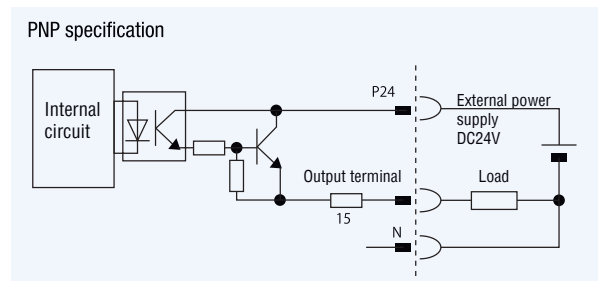

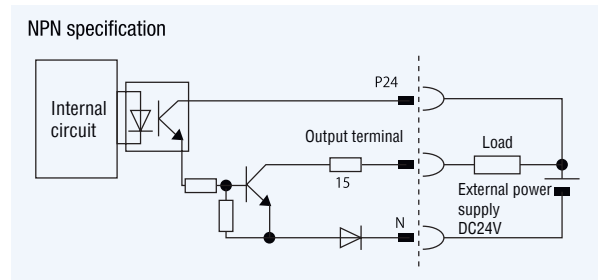

Input Part External Input Specifications

Item	Specification
Input voltage	DC24V ±10%
Input current	5 mA, 1 circuit
ON/OFF voltage	ON voltage: 18 VDC min. OFF voltage: 6 VDC max.

Output Part External Output Specifications

Item	Specification
Load voltage	DC24V
Maximum load current	50 mA, 1 circuit
Leak current	2 mA max. per point

Types of PIO Patterns (Control Patterns)

This controller supports seven types of control methods. Please select the PIO pattern that best suits your purpose in Parameter No. 25, "PIO Pattern Selection".

Type	Set value of Parameter No. 25	Mode	Overview
PIO pattern 0	0 (factory setting)	Positioning mode (standard type)	<ul style="list-style-type: none"> Number of positioning points: 64 points Position number command: Binary Coded Decimal (BCD) Zone signal output (*1) : 1 point Position zone signal output (*2) : 1 point
PIO pattern 1	1	Teaching mode (teaching type)	<ul style="list-style-type: none"> Number of positioning points: 64 points Position number command: Binary Coded Decimal (BCD) Position zone signal output (*2) : 1 point Jog (inching) operation using PIO signals is supported. Current position data can be written to the position table using PIO signals.
PIO pattern 2	2	256-point mode (256 positioning points)	<ul style="list-style-type: none"> Number of positioning points: 256 points Position number command: Binary Coded Decimal (BCD) Position zone signal output (*2) : 1 point

(*1) Zone signal output: A desired zone is set by Parameter Nos. 1 and 2 or 23 and 24, and the set zone always remains effective once home return has completed.

(*2) Position zone signal output: This function is available as part of a position number. A desired zone is set in the position table and becomes effective only when the corresponding position is specified, but not with commands specifying other positions.

(Note 1) Pulse Train Control Model is available only if the pulse train control type is indicated (from PCON-CA-PLN and PLP) at the time of purchase.

PIO Patterns and Signal Assignments

The table below lists the signal assignments for the I/O flat cable under different PIO patterns. Connect an external device (such as a PLC) according to this table.

Pin number	Category	PIO function	Parameter No. 25, "PIO pattern selection"					
			0	1	2	3	4	5
			Positioning mode	Teaching mode	256-point mode	512-point mode	Solenoid valve mode 1	Solenoid valve mode 2
	Input	Number of positioning points	64 points	64 points	256 points	512 points	7 points	3 points
		Home return signal	○	○	○	○	○	—
		Jog signal	—	○	—	—	—	—
		Teaching signal (writing of current position)	—	○	—	—	—	—
	Output	Brake release	○	—	○	○	○	○
		Moving signal	○	○	—	—	—	—
		Zone signal	○	△ (Note 1)	△ (Note 1)	—	○	○
		Position zone signal	○	○	○	—	○	○

18B		—						
19B	0V	N						
20B	0V	N						

(Note) In the table above, asterisk symbol "*" accompanying each code indicates a negative logic signal. PM1 to PM8 are alarm binary code output signals that are used when an alarm generates.

(Note 1) In all PIO patterns other than 3, this signal can be switched with PZONE by setting Parameter No. 149 accordingly.

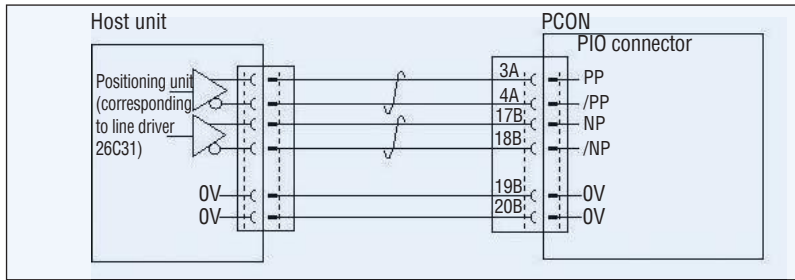

(Note 2) The setting will not become effective until the home return is completed.

Reference) Negative logic signal

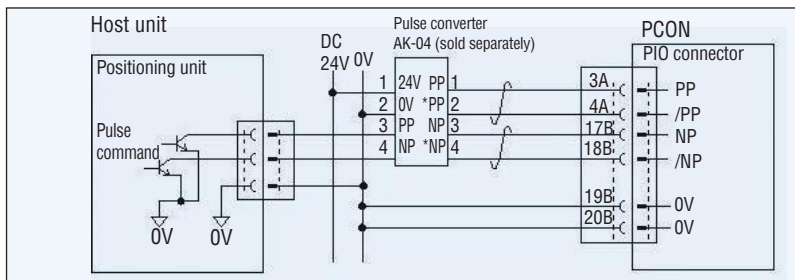

Signals denoted by "*" are negative logic signals. Negative logic input signals are processed when turned OFF. Negative logic output signals normally remain ON while the power is supplied, and turn OFF when the signal is output. Note: The names of the signals above inside "()" are functions before the unit returns home.

Pulse-train Control Circuit

■ Host Unit = Differential Type

■ Host Unit = Open Collector Type The AK-04 (optional) is needed to input pulses.

⚠ Caution: Use the same power supply for open collector input/output to/from the host and for the AK-04.

Command Pulse Input Patterns

	Command pulse-train pattern	Input terminal	Forward	Reverse	
Negative logic	Forward pulse-train	PP·/PP			
	Reverse pulse-train	NP·/NP			
	A forward pulse-train indicates the amount of motor rotation in the forward direction, while a reverse pulse-train indicates the amount of motor rotation in the reverse direction.				
	Pulse-train	PP·/PP			
	Sign	NP·/NP	Low	High	
	The command pulses indicate the amount of motor rotation, while the sign indicates the rotating direction.				
Positive logic	Forward pulse-train	PP·/PP			
	Reverse pulse-train	NP·/NP			
	Command phases A and B having a 90° phase difference (multiplier is 4) indicate the amount of rotation and the rotating direction.				
	Phase A/B pulse-train	PP·/PP			
	Phase A/B pulse-train	NP·/NP			
	Sign	NP·/NP	High	Low	

I/O Signals in Pulse-train Control Mode

The table below lists the signal assignments for the flat cable in the pulse-train control mode. Connect an external device (such as PLC) according to this table.

Pin number	Category	I/O number	Signal abbreviation	Signal name	Function description
1A	24V		P24	Power supply	I/O power supply +24 V
2A	24V		P24	Power supply	I/O power supply +24 V
3A	Pulse input		PP	Differential pulse-train input (+)	Differential pulses are input from the host. Up to 200 kpps can be input.
4A			/PP	Differential pulse-train input (-)	
5A	Input	N0	SON	Servo ON	The servo is ON while this signal is ON, and OFF while the signal is OFF.
6A		IN1	RES	Reset	Present alarms are reset when this signal is turned ON.
7A		IN2	HOME	Home return	Home return operation is performed when this signal is turned ON.
8A		IN3	TL	Torque limit selection	When this signal is turned ON, the motor torque is limited to the value set by the parameter.
9A		IN4	CSTP	Forced stop	The actuator is forcibly stopped when this signal has remained ON for 16 ms or more. The actuator decelerates to a stop at the torque set in the controller and the servo turns OFF.
10A		IN5	DCLR	Deviation counter clear	This signal clears the deviation counter.
11A		IN6	BKRL	Forced brake release	The brake is forcibly released.
12A		IN7	RMOD	Operation mode switching	The operation mode can be switched when the MODE switch on the controller is set to AUTO. (AUTO when this signal is OFF, and to MANU when the signal is ON.)
13A		IN8	NC	—	Not used
14A		IN9	NC	—	Not used
15A		IN10	NC	—	Not used
16A		IN11	NC	—	Not used
17A		IN12	NC	—	Not used
18A		IN13	NC	—	Not used
19A		IN14	NC	—	Not used
20A	IN15	NC	—	Not used	
1B	Output	OUT0	PWR	System ready	This signal turns ON when the controller becomes ready after the main power has been turned on.
2B		OUT1	SV	Servo ON status	This signal turns ON when the servo is ON.
3B		OUT2	INP	Positioning complete	This signal turns ON when the amount of remaining travel pulses in the deviation counter falls within the in-position band.
4B		OUT3	HEND	Home return complete	This signal turns ON upon completion of home return.
5B		OUT4	TLR	Torque limited	This signal turns ON upon reaching the torque limit while the torque is limited.
6B		OUT5	*ALM	Controller alarm status	This signal turns ON when the controller is normal, and turns OFF when an alarm generates.
7B		OUT6	*EMGS	Emergency stop status	This signal turns ON when the emergency stop of the controller is cancelled, and turns OFF when an emergency stop is actuated.
8B		OUT7	RMDS	Operation mode status	The operation mode status is output. This signal turns ON when the controller is in the manual mode.
9B		OUT8	ALM1	Alarm code output signal	An alarm code is output when an alarm generates. For details, refer to the operation manual.
10B		OUT9	ALM2		
11B		OUT10	ALM4		
12B		OUT11	ALM8		
13B		OUT12	*ALML	Minor failure alarm	This signal is output when a message-level alarm generates.
14B		OUT13	NC	—	Not used
15B		OUT14	ZONE1	Zone signal 1	This signal turns ON when the current position of the actuator falls within the parameter-set range.
16B	OUT15	ZONE2	Zone signal 2		
17B	Pulse input		NP	Differential pulse-train input (+)	Differential pulses are input from the host. Up to 200 kpps can be input.
18B			/NP	Differential pulse-train input (-)	
19B	0V		N	Power supply	I/O power supply 0 V
20B	0V		N	Power supply	I/O power supply 0 V

(Note) "*" indicates a negative logic signal. Negative logic signals are normally ON while the power is supplied, and turn OFF when the signal is output.

(Note) The number of encoder pulses is 800 with all RCP5 series models. For details, refer to the operation manual.

Field Network Specification: Explanation of Operation Modes

If the PCON-CA is controlled via a field network, you can select one of the following five modes to operate the actuator. Please note that the data areas required on the PLC side will vary depending on the mode.

Mode Description

	Mode	Description
0	Remote I/O mode	In this mode, the actuator is operated by controlling the ON/OFF of bits via the network, just like with the PIO specification. The number of positioning points and functions vary with each of the operation patterns (PIO patterns) that can be set by the controller's parameter.
1	Position/simple direct numerical mode	The target position is specified by directly entering a value, while other operating conditions (speed, acceleration, etc.) are set by specifying the desired position number corresponding to the desired operating conditions already input to the position data table.
2	Half direct numerical mode	The actuator is operated by specifying the speed, acceleration/deceleration and push current, in addition to the target position, by directly entering values.
3	Full direct numerical mode	The actuator is operated by specifying the target position, speed, acceleration/deceleration, push current control value, etc., by directly entering values. The current position, current speed, command current, etc., can also be read.
4	Remote I/O mode 2	Same as the above remote I/O mode, plus the current position read function and command current read function.

Required Data Size for Each Network

		DeviceNet	CC-Link	PROFIBUS-DP	CompoNet	PROFINET-IO	EtherCAT	EtherNet/IP
0	Remote I/O mode	1CH	1 station	2 bytes	2 bytes	2 bytes	2 bytes	2 bytes
1	Position/simple direct numerical mode	4CH	1 station	8 bytes	8 bytes	8 bytes	8 bytes	8 bytes
2	Half direct numerical mode	8CH	2 stations	16 bytes	16 bytes	16 bytes	16 bytes	16 bytes
3	Full direct numerical mode	16CH	4 stations	32 bytes	32 bytes	32 bytes	32 bytes	32 bytes
4	Remote I/O mode 2	6CH	1 station	12 bytes	12 bytes	12 bytes	12 bytes	12 bytes

List of Functions by Operation Mode

	Remote I/O mode	Position/simple direct numerical mode	Half direct numerical mode	Full direct numerical mode	Remote I/O mode 2
Number of positioning points	512 points	768 points	Unlimited	Unlimited	512 points
Operation by direct position data specification	—	○	○	○	—
Direct speed/acceleration specification	—	—	○	○	—
Push-motion operation	○	○	○	○	○
Current position read	—	○	○	○	○
Current speed read	—	—	○	○	—
Operation by position number specification	○	○	—	—	○
Completed position number read	○	○	—	—	○

* "○" indicates that the operation is supported, and "—" indicates that it is not supported.

PCON-CA

PCON-CFA

Specification List

Item	Description				
	PCON-CA	PCON-CFA			
Number of controlled axes	1 axis				
Power-supply voltage	DC24V±10%				
Load current (including control-side current consumption) (Note 1)	RCP2 RCP3	Motor type	20P, 28P, 28SP 42P, 56P 60P, 86P	1 A max. 2.2 A max.	
		Motor type	28P, 35P, 42P, 56P, 42SP 60P, 86P, 56SP	High-output setting disabled: 2.2 A max. High-output setting enabled: 3.5 A rated / 4.2 A max.	
	RCP4 RCP5	Motor type	28P, 35P, 42P, 56P, 42SP 60P, 86P, 56SP	High-output setting disabled: 2.2 A max. High-output setting enabled: 3.5 A rated / 4.2 A max.	6 A max.
		Motor type	28P, 35P, 42P, 56P, 42SP 60P, 86P, 56SP	High-output setting disabled: 2.2 A max. High-output setting enabled: 3.5 A rated / 4.2 A max.	6 A max.
Electromagnetic brake power (for actuator with brake)	DC24V ±10% 0.15A (max)				
Rush current (Note 2)	8.3A				
Momentary power failure resistance	MAX.500μs				
Supported encoder	Battery-less absolute encoder/incremental encoder				
Actuator cable length	20m max.				
External interface	PIO specification	Dedicated 24-VDC signal inputs/outputs (NPN/PNP selectable) --- Up to 16 input points, up to 16 output points, cable length up to 10m			
	Field network specification	DeviceNet, CC-Link, PROFIBUS-DP, CompoNet, PROFINET-IO, EtherCAT, EtherNet/IP			
Data setting, input method	PC software, touch panel teaching pendant, teaching pendant				
Data retention memory	Position data and parameters are saved in non-volatile memory. (There are no limits to how many times the memory can be rewritten.)				
Operation mode	Positioner mode/pulse-train control mode (selectable by parameter setting)				
Number of positioner-mode positions	Up to 512 points for positioner type or up to 768 points for network type (Note) The total number of positioning points varies depending on which PIO pattern is selected.				
Pulse-train interface	Input pulses	Differential type (line-driver type): 200 kpps max., cable length up to 10m			
		Open-collector type: Not supported. * If the host uses open-collector outputs, use the separately sold AK-04 (optional) to change them to differential outputs.			
	Command pulse magnification (Electronic gear: A/B)	1/50 < A/B < 50/1 Setting range of A and B (set by parameters): 1 to 4096			
Feedback pulse output	None				
Insulation resistance	Not less than 10 MΩ at 500 VDC,				
Electric shock protection mechanism	Class 1, basic insulation				
Mass (Note 3)	Incremental specification	Screw fixing type: Not more than 250g / DIN rail fixing type: Not more than 285g	Screw fixing type: Not more than 270g / DIN rail fixing type: Not more than 305g		
	Simple absolute specification (including 190 g for battery)	Screw fixing type: Not more than 450g / DIN rail fixing type: Not more than 485g			
Cooling method	Natural cooling by air		Forced cooling by air		
Environment	Ambient operating temperature	0 to 40°C			
	Ambient operating humidity	Not more than 85% RH (non-condensing)			
	Operating ambience	Free from corrosive gases			
	Degree of protection	IP20			

Note 1) 0.3 A higher for the field network specification.

Note 2) Rush current flows for approx. 5 msec after the power is input (at 40°C). Exercise caution that the rush current value varies depending on the impedance of the power line.

Note 3) 30 g heavier for the field network specification.

1 Adding the PLC Function

MSEP-LC

This function makes it possible to operate actuators using a ladder logic program, and to control the state of I/O (Input/Output) signals. If your system is small enough, it can be controlled using only the MSEP-LC. In a large scale system an MSEP-LC can perform distributed control of each process and reduce the load of a main PLC. In addition, it can also simplify your program and make troubleshooting easier.

2 Supporting Actuators with the Battery-less Absolute Encoder

MSEP-LC MSEP-C

Features of actuators with the battery-less absolute encoder

- A** Home return is no longer necessary, so these actuators start and restart quicker than incremental actuators to begin working right away. They are also free from problems relating to home return, such as position shift.
- C** Compared to standard absolute actuators, no battery is required, which results in the following benefits:
 - ▶ No need to purchase or replace batteries
 - ▶ No need to control the stocks and replacement timing of batteries
 - ▶ No need to make adjustment (absolute reset) normally required after battery replacement

RoboCylinder with the battery-less absolute encoder

RCP5

3 Supporting the PowerCon (High-output Driver) and Micro Cylinder

MSEP-LC MSEP-C

When the PowerCon (newly developed high-output driver) is installed and combined with the RCP5 or RCP4, it has achieved a 1.5 times faster maximum speed as well as double the payload compared to the conventional models. In addition, the ultra-small Micro Cylinders are also supported, giving you a greater variety of actuators - ranging from small to large - to choose from.

Maximum speed vs. conventional models
1.5 times faster

Payload vs. conventional models
more than Double

PowerCon supported
RCP5-SA RCP5-RA

Micro Cylinder
RCD-RA

Choice of 6 boards to install

- 1 Pulse motor board
- NEW** 2 Pulse motor board for battery-less absolute specification
- NEW** 3 PowerCon (pulse high-output motor) board
- NEW** 4 PowerCon board for battery-less absolute specification
- 5 24VAC servo motor board
- NEW** 6 Micro Cylinder (BLDC servo motor) board

** Boards 3 and 4 permit operation of only one axis per board.

4 Compatible Field Networks

MSEP-LC MSEP-C

DeviceNet, CC-Link, PROFIBUS-DP, CompoNet, EtherCAT, EtherNet/IP, PROFINET IO and other major field networks are directly accessible.

Features of the network specification

- ▶ 256 positioning points per axis
- ▶ Can be operated by inputting values for target positions and speed
- ▶ Monitor the current position in real time
- ▶ Substantially shorter communications time inside the controller (approx. one-tenth of conventional models)

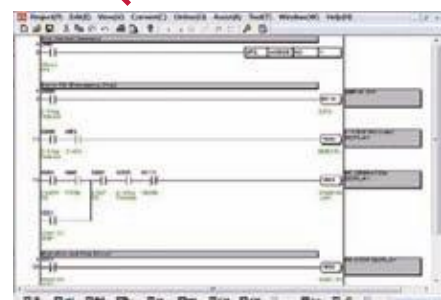

5 Free Ladder Logic Support Software Is Available from Our Website

MSEP-LC

Ladder logic support software is available for free download from our website. You can create a ladder program before purchasing any product.

Free www.robocylinder.de -> downloads -> software

LC-LADDER

Application Examples

Rear Panel Positioning System

Work parts that have shifted can be realigned during the processing stage of an automotive rear panel by corrective "pushing" by the RoboCylinder. Even when the number of axes increases, a single controller can support them all, making wiring simple.

Palletizing System

Thanks to the battery-less absolute encoder, operations can easily be resumed even after an emergency stop or other halts in operation.

Work Transfer Between Processing Systems

Work parts can be transferred between systems without using a dedicated PLC.

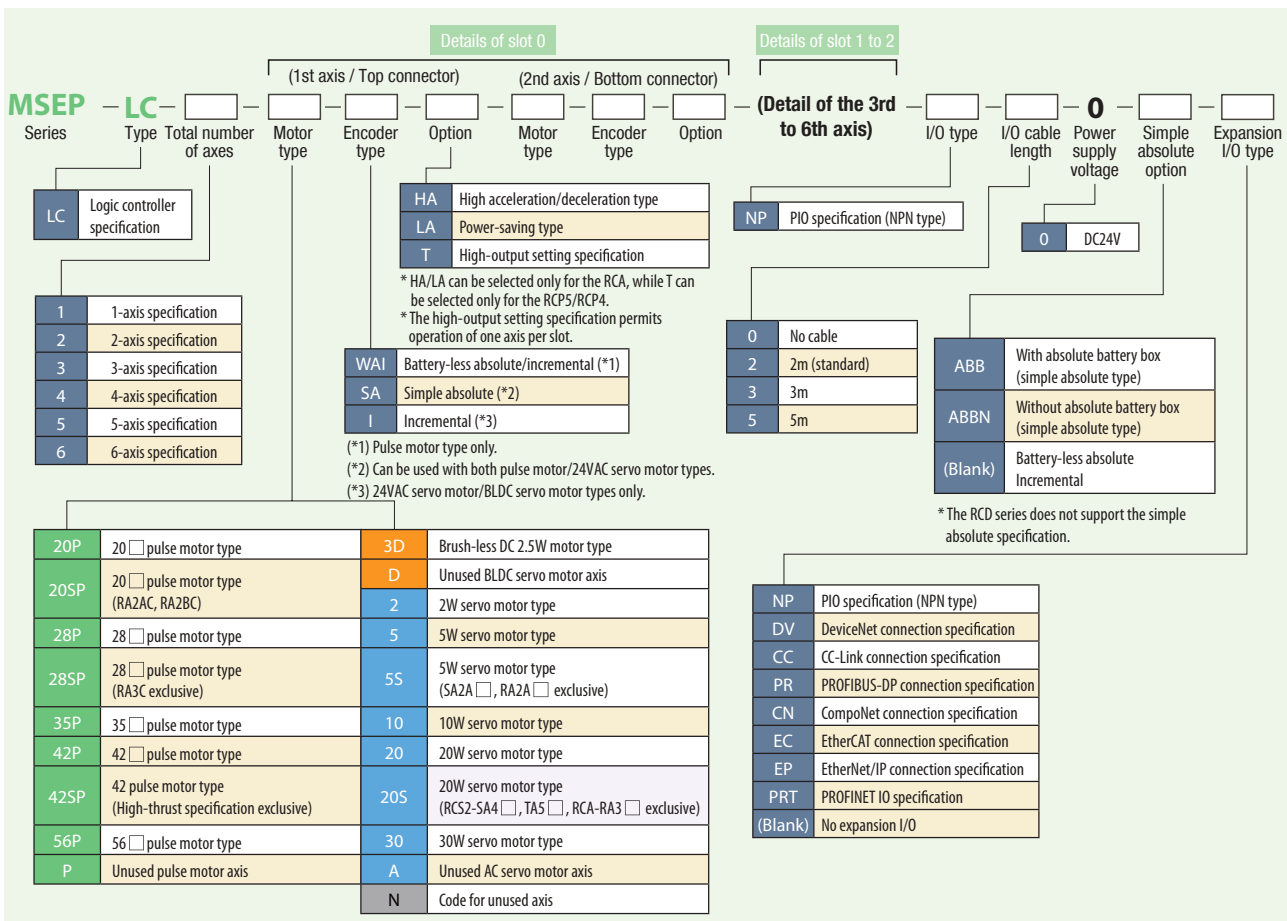

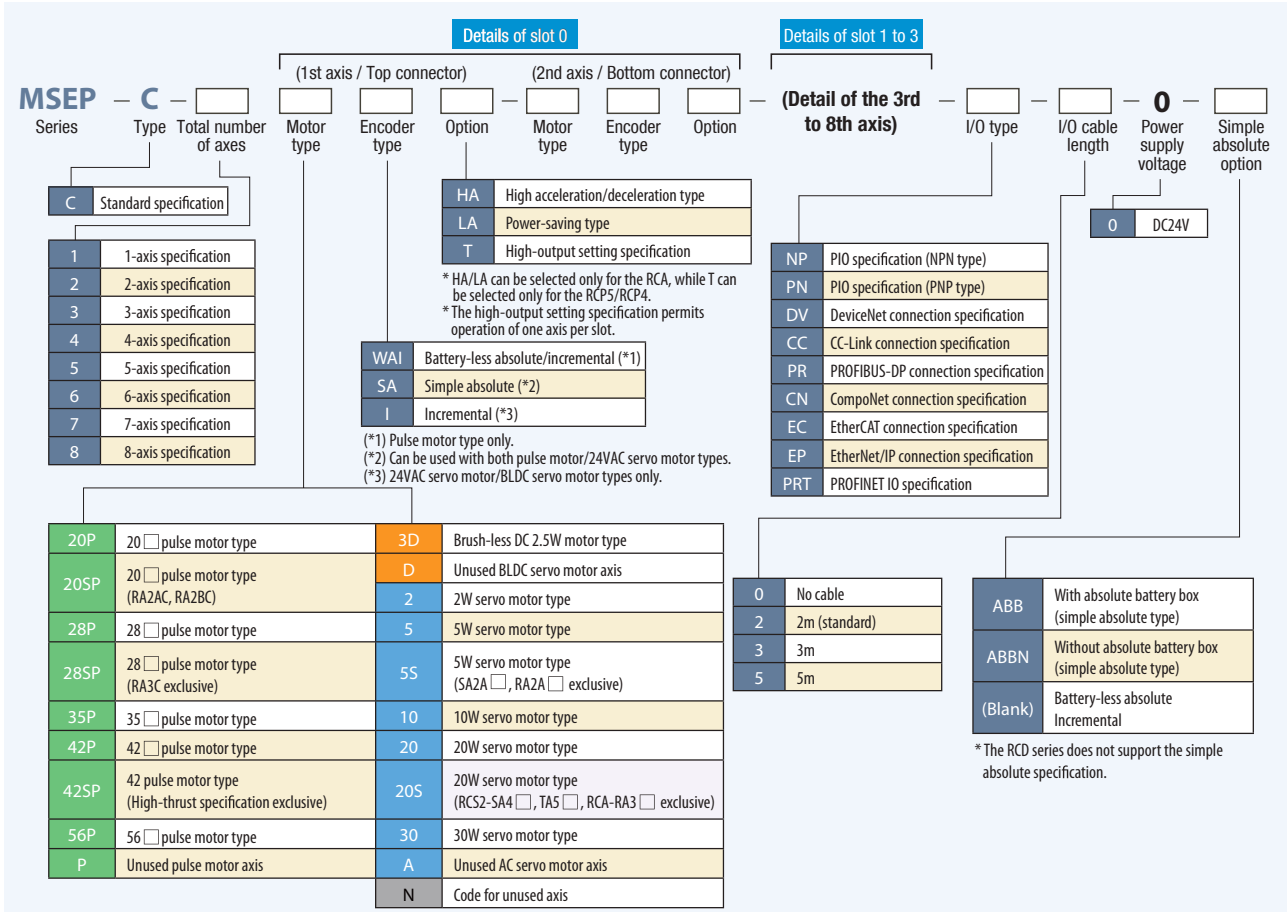

Positioning for Automotive Assembly Lines

In a large-scale assembly line, implementing distributed control of each process and connecting to the host controller via a field network will reduce the load of the host controller.

MSEP Controller Models

How to Operate the MSEP-C

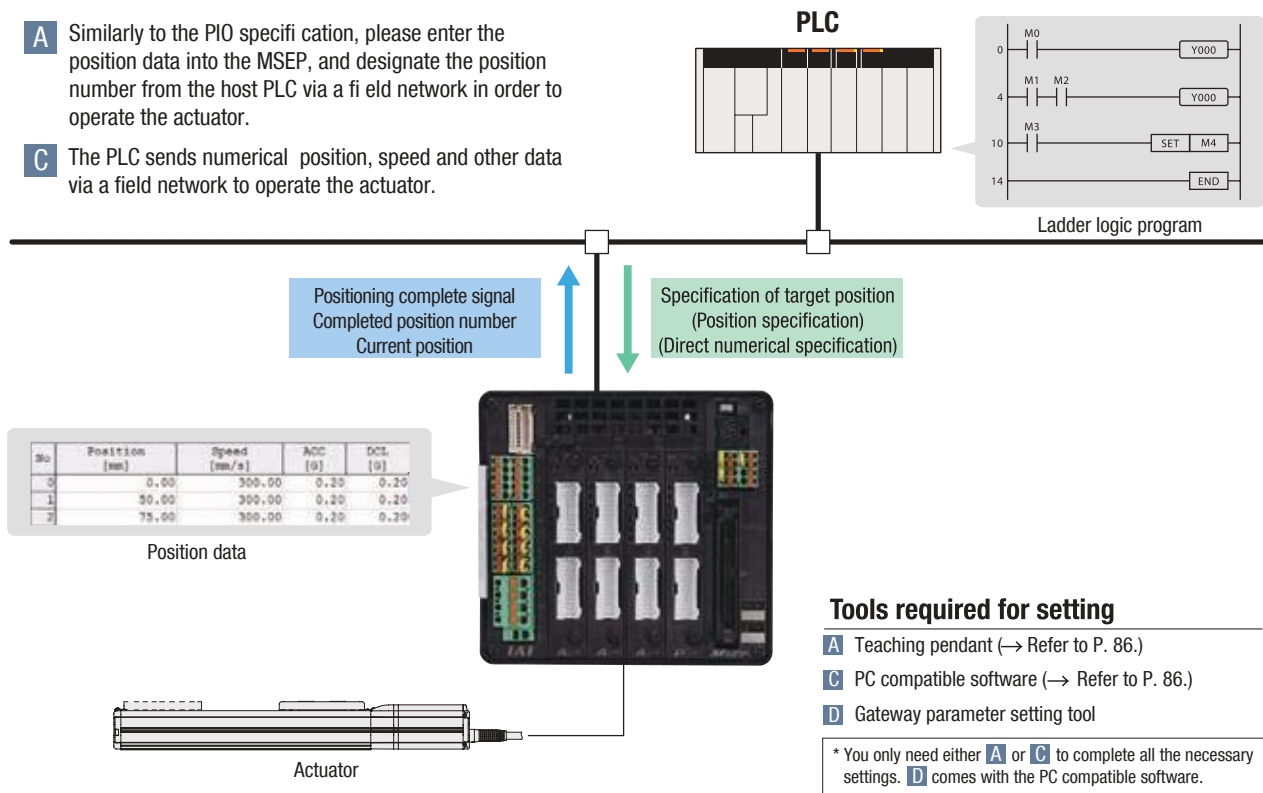

PIO Specification

Please enter the position data into the MSEP, and designate the position number from the host PLC via PIO in order to operate the actuator.

Field Network Specification

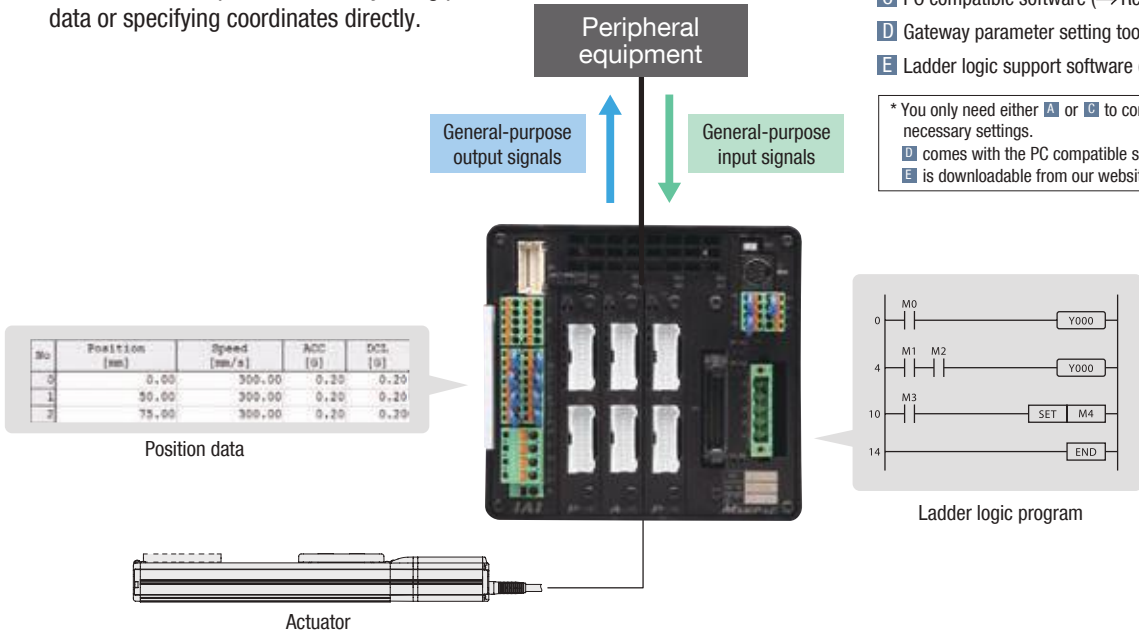

- A** Similarly to the PIO specification, please enter the position data into the MSEP, and designate the position number from the host PLC via a field network in order to operate the actuator.
- C** The PLC sends numerical position, speed and other data via a field network to operate the actuator.

How to Operate the MSEP-LC

PIO Specification

The MSEP-LC runs a ladder logic program internally to operate the axis and control the PIO I/O signals. The axis can be operated either by using position data or specifying coordinates directly.

Tools required for setting

- A** Teaching pendant (→ Refer to P. 86.)
- C** PC compatible software (→ Refer to P. 86.)
- D** Gateway parameter setting tool
- E** Ladder logic support software (→ Refer to P. 78.)

* You only need either **A** or **C** to complete all the necessary settings.
D comes with the PC compatible software.
E is downloadable from our website.

Field Network Specification

The MSEP-LC runs a ladder logic program internally to operate the axis and control I/O signals via a network. The axis can be operated either by using position data or specifying coordinates directly.

Tools required for setting

- A** Teaching pendant (→ Refer to P. 86.)
- C** PC compatible software (→ Refer to P. 86.)
- D** Gateway parameter setting tool
- E** Ladder logic support software (→ Refer to P. 78.)

* You only need either **A** or **C** to complete all the necessary settings.
D comes with the PC compatible software.
E is downloadable from our website.

Names of the MSEP Controller Components

⚠ Caution: With the high-output setting specification (PowerCon), only one axis can be connected per slot.

Descriptions of Each Component

- 1 Motor-encoder connectors for the actuator connection**
Connect motor-encoder cable to the actuator
- 2 Connector for the absolute data backup battery**
Connect the absolute data backup battery if the controller has the absolute position encoder specification
- 3 Connector for the external brake input**
The connector to input a signal to release the brake for the actuator externally.
- 4 Connector for the emergency stop input for power source shut-off**
The emergency stop input connector to connect in/output terminal of the external relay of the motor drive shut-off and each driver slot (*1).
- 5 Information card for configuration of the connecting axes**
The information card contains information regarding the configuration of the controller axes which is removable to examine the contents.
- 6 +24 V power source input connector**
The main power source connector for the controller: Motor drive source shut-down is possible while restoring the power source for the controller unit in case of an emergency shut-down; This is because the terminals for the power source of the motor and the controller are separate.
- 7 Fan unit**
Easily replaceable fan unit. (Replacement fan unit: Model MSEP-FU)
- 8 AUTO/MANUAL switch**
To switch automatic operation to/from manual operation
- 9 SIO connector**
To connect teaching box and the connecting cable for PC software
- 10 System I/O connector**
The connector for remote AUTO/MANU switch input and emergency stop input for the entire controller with functions including an external regeneration-resistance expansion terminal.
- 11 PIO connector/ field network connection connector (MSEP-C only)**
The PIO specification - connects to a 68-pin ribbon I/O cable.
The field network specification - connects to a field network type specified on the MSEP controller.
- 12 Standard I/Os (MSEP-LC only)**
The MSEP-LC comes installed with a 40-pin PIO connector as standard equipment.
- 13 Expansion I/Os (MSEP-LC only)**
Expansion I/Os can be installed as an option.
Available I/O types include PIO, DeviceNet, CC-Link, PROFIBUS-DP, CompoNet, Ethernet/IP, EtherCAT and PROFINET-IO.

(*1) The shut-off feature is available on a single slot basis which is for two axes per slot. Please note that a single axis basis cannot be accommodated.

Input/Output (PIO) Signals

The MSEP-C has dedicated inputs and outputs set to PIO signals at 32 input points/32 output points. The axis operates when each signal is turned ON/OFF from the host PLC.

With the MSEP-LC, general-purpose input/output signals at 32 input points/32 output points can be used in a ladder logic program by using the standard 16 input points/16 output points plus expansion I/Os.

Table of General Specifications

Specification item		Description					
Number of axes in the controller		8 axes max. (MSEP-C), 6 axes max. (MSEP-LC)					
Controller/ Motor input power		DC24V ±10%					
Brake power		0.15 A x Number of axes					
Current consumption by control power		0.8A					
Controller inrush current		5A max., under 30 ms					
Motor consumption current	Servo motor type	Rated ampere	Maximum		Pulse motor type	Rated ampere	Maximum
			Energy saver	Stand./Hi-accel.			
	2W	0.8A		4.6A	20P		1.0A
	3W(RCD)	0.7A		1.5A	28P		1.0A
					28SP		1.2A
	5W	1.0A		6.4A	35P		2.0A (High-output incompatible driver)
	10W(RCL)	1.3A		6.4A			
	10W(RCA/RCA2)			2.5A	4.4A	42P	2.2A (High-output disabled)
	20W	1.3A	2.5A	4.4A	56P		3.5A (High-output enabled)
20 W (20S type)	1.7A	3.4A	5.1A				
30W	1.3A	2.2A	4.4A				
Motor inrush current		Slot numbers x 10A max., under 5ms					
Motor-encoder cable length		Maximum length 20m (Note: 10m maximum for simple absolut encoder specification)					
Serial communication (SIO port: dedicated teaching)		RS485 1ch (Modbus protocol compatible) Speed 9.6 to 230.4kbps					
External interface	PIO specification	PIO specification : DC24 V dedicated signal in/output; Maximum input of 4 points/axis; Maximum output of 4 points/axis; Maximum cable length 10m					
	Field network specification	DeviceNet, CC-Link, PROFIBUS-DP, PROFINET IO, CompoNet, EtherCAT, EtherNet/IP					
Data configuration and input method		PC software application, touch panel teaching pendant, gateway parameter configuration tool					
Data retention memory		Restore the position data and parameter in non-volatile memory (unlimited input)					
Positioning points		PIO specification : 2 or 3 points Field network specification: 256 points (no limited input for the simple numerical control and the direct numerical control) (Note) The number of designated positions vary depending on the parameter configuration with motion mode selection.					
LED display (On the front panel)		LED for driver status, 8 LEDs (for each driver board) Status LED, 4 LEDs (PIO specification), 7 LEDs (Fieldbus specification)					
Electromagnetic brake force release		Enable to force-release by transmitting a deactivation signal to each axis (DC24 V input)					
Surge protection		Overcurrent protection (A cut-off semiconductor circuit is built-in on each slot)					
Electric shock protection		Class I basic insulation					
Insulation resistance		DC500V 10 MΩ					
Weight		620g / 690g with the simple absolute encoder specification / 1950g with the absolute data backup battery box (8-axis specification)					
Cooling method		Forced air cooling					
Ambient operating temperature/humidity		0 to 40°C, under 85% RH (non-condensing)					
International Protection code		IP20					
PLC function (MSEP-LC)		Dedicated ladder program (Program capacity: 4k steps)					

Exterior Dimensions

Options

Teaching pendant

Summary Teaching device for positioning input, test operation, and monitoring.

Model **TB-02-C**

Setting

Specification

Rated voltage	24V DC
Power consumption	3.6 W or less (150 mA or less)
Ambient operating temperature	0~40°
Ambient operating humidity	20 to 80%RH (non-condensing)
Environmental resistance	IP20
Weight	470 g (TB-02 unit only)

PC software (Windows only) * For the MSEP field network specification, the PC software is required.

Summary A startup support software for inputting positions, performing test runs, and monitoring. With enhancements for adjustment functions, the startup time is shortened.

Model **RCM-101-MW** (External device communication cable + RS232 conversion unit)

Setting

Supported Windows: 2000 SP4 or later / XP SP2 or later / Vista / 7 / 8

Model **RCM-101-USB** (External device communication cable + USB converter adaptor + USB cable)

Setting

External regeneration resistor

Summary The regeneration resistor converts regenerated current dissipated during deceleration of the motor load into heat. The MSEP controller has an internal regeneration resistor for ordinary operations, however, depending on the operational condition, please install an external regeneration resistor if the internal regeneration resistor capacity is insufficient.

Model **RER-1**

Exterior dimensions

Driver board

Summary A supplement or modification to the driver board is feasible with the MSEP controller. When the actuator that control motions needs to be modified, just replacing the driver board would serve the purpose without changing the entire controller. (The parameters need to be adjusted when changing the driver board)

Model

Motor type	High output type	Encoder type	Number of axes	Model
Pulse motor	High output setting	Battery-less absolute/incremental	1-axis	MSEP-PPD1-W
		Simple absolute	1-axis	MSEP-PPD1-A
		Simple absolute	1-axis	MSEP-PD1-W
	Cancellation of high output setting	Battery-less absolute/incremental	2-axis	MSEP-PD2-W
		Simple absolute	1-axis	MSEP-PD1-A
		Simple absolute	2-axis	MSEP-PD2-A
24VAC servo motor	—	Incremental	1-axis	MSEP-AD1-I
			2-axis	MSEP-AD2-I
		Simple absolute	1-axis	MSEP-AD1-A
			2-axis	MSEP-AD2-A
BLDC servo motor	—	Incremental	1-axis	MSEP-DD1-I
			2-axis	MSEP-DD2-I

Box for the absolute data backup battery

Summary If the absolute position encoder specification is selected with code ABB, the absolute data backup battery box is included with the controller. However, if the battery box is ordered as a separate unit, it does not include the battery but just the box itself. If the battery is needed, please purchase it separately. (Model: AB-7).

Model **MSEP-ABB** (Batteries not included)

Exterior dimensions See P.85

* A cable (Model CB-MSEP-AB005) that connects the absolute data backup battery box to the MSEP is included with the box.

Replacement battery

Summary The replacement battery for the absolute data backup battery box.

Model **AB-7**

Replacement fan unit

Model **MSEP-FU**

Introducing MSEL, the Multi-axis Program Controller with a High-output Driver (PowerCon) for the RoboCylinder

1 The Pulse Motor Equipped RoboCylinder Controls a Maximum of 4 Axes

Traditionally, up to two pulse motor actuators could be controlled by a program controller. By using MSEL, a maximum of 4 axes can be controlled. Interpolation function is also available, enhancing its range of use.

Example of Combinations

3-axis Cartesian (Pulse Motor)

+

RCP5

A Maximum of 4 Axes Can Be Connected

2 The RoboCylinder RCP5 and RCP4 Can Be Connected

PowerCon drivers make it possible to perform interpolation functions using the high-output RCP5 and RCP4 RoboCylinders, which could not be performed with the traditional PSEL program controller.

3 Significant Enhancements in Programming Functions

Compared to the conventional product (PSEL), we have enhanced the functionality of the MSEL by having 4 times as many programs and 20 times more positions.

	Conventional product PSEL		New product MSEL
Number of programs	64	4 times →	255
Number of program steps	2000	5 times →	9999
Number of multi-tasking programs	8	2 times →	16
Number of positions	1500	20 times →	30000 (*1)

(*1) Note that the number of points available for backup in system memory is 10000 points.

4

Equipped with an Optional Expansion I/O Slot

In addition to the standard I/O (IN 16 points/OUT 16 points), an expansion I/O slot can be filled with either a PIO board (IN 16 points/OUT 16 points) or one of four types of field networks.

	Conventional Product PSEL	New Product MSEL
Max. I/O Input and Output Points	24/8 Not applicable for expansion	32/32 When the expandable slot is used
Field Network	3 types (CC-Link, DeviceNet, PROFIBUS-DP)	4 types (CC-Link, DeviceNet, PROFIBUS-DP, EtherNet/IP)
Other External Connections	RS232C: 1ch	RS232C: 1ch

5

Cable and Cost Reduction

When Controlling 4 Actuator Axes

Conventional Product PSEL 2 units + 24V power supply

New Product MSEL 1 unit

6

Global Version according to CE Safety Standard

MSEL-PG is applicable for Safety Categories B to 3.

(To apply with Safety Category, it is necessary that the user establish a safety circuit out of the controller.)

7

Compatible with Various Models

The MSEL can be connected to a range of pulse motor type RoboCylinders including RCP5/RCP4/RCP3/RCP2.

Service Parts

Model number	CB-CAN-MPA <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	Integrated Motor-Encoder Cable	for RCP5/RCD
	CB-CAN-MPA <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> - RB	Integrated Motor-Encoder Robot Cable	

* Please indicate cable length (L) in , maximum 20m. e.g.) 080=8m

Minimum bending radius 5m or less length R = 68mm or more (for moving parts)
 Longer than 5m R = 73mm or more (for moving parts)

* The robot cable is designed for flex-resistance: Please use the robot cable if the cable has to be installed through the cable track.

(Note 1) If the cable is 5m or longer, Ø9.1 cable diameter applies for a non-robot cable and Ø10 for a robot cable.
